Caractéristiques

Type de base de données

Type de base de données	Study databases
Base de données issues d'enquêtes, précisions	Repeated cross-sectional studies (except case control studies)
Origine du recrutement des participants	A population file
Le recrutement dans la base de données s'effectue dans le cadre d'une étude interventionnelle	No
Informations complémentaires concernant la constitution de l'échantillon	<p>The sampling plan is three-stage (primary units, households and individuals) cluster sampling design based on the national census. The sampling was stratified on region and size of urban area and balanced on the average age of the head of household and household's income.</p> <p>The sampling plan has been designed with the help of the statistical methods unit at the National Institute of Statistics and Economic Studies (INSEE) to enable processing at ZEAT (NUTS 1) level for variables in common with the ENNS study by the French Institute for Public Health Surveillance (InVS).</p>

Objectif de la base de données

Objectif principal	Quantitatively characterize individual eating habits, nutritional intakes and dietary exposure in the population to all substances present in food, particularly those that are regulated (environmental contaminants, pesticide residues, food additives).
Critères d'inclusion	<p>INCA1: The sample is made up of 1985 adults aged 15 years old and over and 1018 children aged 3 to 14 years old. Representativeness is ensured for mainland France (excluding Corsica).</p> <p>INCA2: The sample is made up of 2,624 adults aged 18 to 79 years old and 1,455 children aged 3 to 17 years old.</p> <p>Representativeness is ensured for mainland France (excluding Corsica).</p>

Type de population

Age	Infant (28 days to 2 years) Early childhood (2 to 5 years)
-----	---

Childhood (6 to 13 years)
Adolescence (13 to 18 years)
Adulthood (19 to 24 years)
Adulthood (25 to 44 years)
Adulthood (45 to 64 years)
Elderly (65 to 79 years)

Population concernée

General population

Sexe

Male
Woman

Taille de la base de données

Taille de la base de données (en nombre d'individus)

[10 000-20 000[individuals

Détail du nombre d'individus

INCA1: 1985 adults aged 15 years old and over and 1018 children aged 3 to 14 years old. INCA2: 2624 adults aged 18 to 79 years old and 1455 children aged 3 to 17 years old.

Données

Activité de la base

Data collection completed

Type de données recueillies

Clinical data
Declarative data
Administrative data

Données déclaratives, précisions

Paper self-questionnaire
Internet self-questionnaire
Face to face interview
Phone interview

Données administratives, précisions

All of the sociodemographic variables are those used by public statistics: region, size of urban area, age, gender, profession and socioprofessional category of each person and of the head of household, educational level, size of household, household income (in brackets).

Existence d'une bibliothèque	No
Paramètres de santé étudiés	Others
Autres, précisions	overweight and obesity, dietary exposure

Modalités

Mode de recueil des données

Individual eating habits declared may be subject to under-declaration and, more occasionally, over-declaration. The INCA's study survey method has been validated by biomarker on healthy volunteers. Recently, as part of the EFCOVAL European project, declarations of nutritional intake have been compared to the corresponding biomarkers and the deviations from populational indicators stay below 10%. In 2006-7, the participation rate in the study was 63% in 18-79 year-old adults and 69% in 3-17 year old children. The INCA1 and INCA2 method has been designed to enable a comparison with several European countries (UK, Ireland, Sweden, Italy and the Netherlands). A methodological change for INCA3 allows for standardized collection using the WHO's EPIC-SOFT program - translated into several languages and recommended by the European Food Safety Authority (EFSA). It is currently used in Belgium, the Netherlands, Germany and the Czech Republic and adoption is underway in other countries.

Nomenclatures employées

The INCA2 study was subject to a favorable opportunity opinion from the French National Council for Statistical Information (CNIS) and a favorable opinion from this Council's label committee (general interest study). The food nomenclatures are specific to each study. Links to the nomenclatures used by EFSA and by European regulations are then made.

Suivi des participants No

Appariement avec des sources administratives No

Description

Accès

Charte d'accès aux données (convention de mise à disposition, format de données et délais de mise à disposition)

The general report from the INCA2 study was published in February 2009 by Afssa (which became the French Agency for Food, Environmental and Occupational Health & Safety [Anses] in 2010) and can be found online at www.anses.fr: Lafay et al (2009) Etude individuelle Nationale des Consommations Alimentaires 2 (INCA2) 2006-7, Agence Française de Sécurité Sanitaire des Aliments, ISBN 978-2-11-097789-2, 225 pages. Disaggregated data can be accessed by signing an agreement with Anses.
