Main features

Type of database

Type of database	Study databases
------------------	-----------------

Study databases (details)	Case control study
---------------------------	--------------------

Database recruitment is carried out by an intermediary	A population file
--	-------------------

Database recruitment is made on the basis of:	Another treatment or procedure
---	--------------------------------

Database recruitment is carried out as part of an interventional study	Yes
--	-----

Details	Performed at individual level
---------	-------------------------------

Additional information regarding sample selection.	Healthcare professionals having attended the Hôtel Dieu Covid screening centre in March-April 2020, tested by nasal SARS CoV2 PCR CASES: PCR+
--	--

CONTROLS: PCR-

Database objective

Main objective Measure the strength of the relationship between tobacco use and the RT-PCR test for SARS-CoV2

Inclusion criteria Care personnel having attended the Hôtel-Dieu Hospital Covid screening centre for symptoms compatible with SARS-CoV2 infection,
-Aged over 18 years,
With an email address,
-Able to express non-objection (=questionnaire feedback)

Population type

Age Adulthood (19 to 24 years)
Adulthood (25 to 44 years)
Adulthood (45 to 64 years)
Elderly (65 to 79 years)

Population covered General population

Pathology

Gender Male
Woman

Geography area Regional

French regions covered by the database Île-de-France

Data collection

Dates

Date of first collection (YYYY or MM/YYYY) 2020

Date of last collection (YYYY or MM/YYYY) 2020

Size of the database

Size of the database (number of individuals) [1000-10 000[individuals

Details of the number of individuals 1000

Data

Database activity Current data collection

Type of data collected Declarative data

Declarative data (detail) Internet self-questionnaire

Details of collected declarative data questionnaire consommation tabac et substituts nicotiques au moment de la réalisation de la PCR SARS-Cov2

Presence of a biobank No

Health parameters studied Others

Other (detail) tobacco use and nicotine replacements

Procedures

Data collection method Lime Survey anonymous questionnaire

Participant monitoring No

Followed pathology
