Adulthood (25 to 44 years)
Adulthood (45 to 64 years)
Elderly (65 to 79 years)
Great age (80 years and more)

Population covered

General population

Pathology

Gender

Male
Woman
Other

Geography area

National

Detail of the geography area

Mainland France, overseas departments and territories

Data collection

Dates

Date of first collection (YYYY or MM/YYYY)

2020

Date of last collection (YYYY or MM/YYYY)

En cours

Size of the database

Size of the database (number of individuals) [1000-10 000[individuals

Details of the number of individuals Over 3,500

Data

Database activity Current data collection

Type of data collected Declarative data

Declarative data (detail) Internet self-questionnaire

Details of collected declarative data variables socio-démographiques, échelles santé mentale, items sur vaccination, consommations, items sur la Covid-19

Presence of a biobank No

Health parameters studied Health event/morbidity
Quality of life/health perception

Quality of life/perceived health (detail) Perceived health scale, visual analogue scales

Procedures

Data collection method Voluntary basis, completion of an online questionnaire

Quality procedure(s) used Permission for use of data sought from principal investigators

Participant monitoring Yes

Monitoring procedures Monitoring by contact with the participant (mail, e-mail, telephone etc.)

Details on monitoring of participants Emails and text messages sent out

Links to administrative sources No

Promotion and access
