Main features	
Type of database	
Type of database	Morbidity registers
Database objective	
Main objective	<p>RECAP is a continuous data collection system designed to understand and monitor the characteristics of psychoactive substance users who are managed by professionals in care, support, and prevention centers for addiction (CSAPA).</p> <p>The data collected is essential for public authorities to help define and evaluate their policies in the field of drugs, particularly to identify trends in service utilization. The national data should also serve to inform the reflections of care professionals on their own actions.</p>
Inclusion criteria	<p>The national data collection concerns any person with an addiction problem, with or without substance use, who has undergone at least one intervention in the facility that welcomed them during the year. The notion of intervention is very broad here, as even the initial reception can be considered an intervention. Individuals who use substances and are seen in young consumers' consultations are also included in the data collection.</p>
Population type	
Age	<p>Adolescence (13 to 18 years)</p> <p>Adulthood (19 to 24 years)</p> <p>Adulthood (25 to 44 years)</p> <p>Adulthood (45 to 64 years)</p>
Population covered	Sick population
Pathology	F10-F19 - Mental and behavioural disorders due to psychoactive substance use

Gender	Male Woman
Geography area	National
Data collection	
Dates	
Size of the database	
Size of the database (number of individuals)	Greater than 20 000 individuals
Data	
Database activity	Current data collection
Type of data collected	Declarative data
Declarative data (detail)	Face to face interview
Presence of a biobank	No
Health parameters studied	Health event/morbidity Others
Procedures	
Participant monitoring	No
Followed pathology	
Links to administrative sources	No
Promotion and access
