

ERA - Arterial Stiffness Progression

Head :Benetos Athanase, U961 INSERM

Last update : 08/14/2014 | Version : 2 | ID : 60044

General

Identification

Detailed name Arterial Stiffness Progression

Sign or acronym ERA

CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency) authorisation
CNIL : 07/07/2008

General Aspects

Medical area
Biology
Cardiology

Health determinants Genetic

Keywords Carotid plaque, arterial stiffness, arterial hypertrophy, environment

Scientific investigator(s) (Contact)

Name of the director Benetos
Surname Athanase
Address 54511 VANDOEUVRE-LES-NANCY
Phone + 33 (0)3 83 15 33 22
Email a.benetos@chu-nancy.fr
Unit U961 INSERM
Organization CHU

Collaborations

Participation in projects, networks and consortia Yes

Funding

Funding status Mixed

Details Inserm, FRM, FDF

Governance of the database

Sponsor(s) or organisation(s) responsible CHU Nancy

Main features

Type of database

Type of database Study databases

Study databases (details) Cohort study

Database recruitment is carried out by an intermediary A selection of health institutions and services

Database recruitment is carried out as part of an interventional study No

Additional information regarding sample selection. Prospective Other bodies active in creating this cohort: INSERM U961, CARLOS LABAT IE2 Inclusion cut-off date: 01/01/1993

Database objective

Main objective

General objective: to evaluate the influence of haemodynamic, biological, and environmental factors on the progression of arterial stiffness in normotensive and hypertensive subjects, as well as role of genetic determinants. The first medium-term evaluation was carried out after 6 years of monitoring 680 patients (1998-1999). A second long-term evaluation is planned for the year 2008-2009 i.e. 10 years after the last evaluation.

Secondary objectives: - To investigate haemodynamic, biological, and genetic determinants for telomere attrition (determinant in cellular ageing) over a period of 10 years (between 1999 and 2009) - To establish the relationship between arterial stiffness, parietal hypertrophy and carotid plaque during different visits.

Inclusion criteria	Normotensive and hypertensive subjects recruited and examined in preventative investigation centres and clinics in Paris (IPC - health examination clinics authorised by social security and CNAM) for assessment
--------------------	---

Population type

Age	Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years)
-----	--

Population covered	Sick population
--------------------	-----------------

Gender	Male Woman
--------	---------------

Geography area	Regional
----------------	----------

French regions covered by the database	Île-de-France
--	---------------

Detail of the geography area	Paris region
------------------------------	--------------

Data collection

Dates

Date of first collection (YYYY or MM/YYYY)	01/1992
--	---------

Date of last collection (YYYY or MM/YYYY)	01/2009
---	---------

Size of the database

Size of the database (number of individuals)	[500-1000[individuals
--	------------------------

Details of the number of individuals	680
--------------------------------------	-----

Data

Database activity	Current data collection
-------------------	-------------------------

Type of data collected	Clinical data Declarative data Paraclinical data Biological data
------------------------	---

Clinical data (detail)	Direct physical measures
------------------------	--------------------------

Medical registration

Declarative data (detail)

Face to face interview

Paraclinical data (detail)

Imaging, pulse wave velocity, central aortic pressure, haemodynamic index

Biological data (detail)

Type of samples taken: Blood samples for DNA extraction (genotyping, telomere length) and dosage of atherosclerosis biological markers (inflammation, lipid oxidation, MMP, homocysteine??).

Presence of a biobank

Yes

Contents of biobank

Serum
DNA

Details of biobank content

Serum bank, DNA bank

Health parameters studied

Health event/morbidity
Health event/mortality

Procedures

Data collection method

Interview: entry from a paper questionnaire (manual input) with double data entry

Participant monitoring

Yes

Details on monitoring of participants

Follow-up duration: 15 years

Links to administrative sources

Yes

Linked administrative sources (detail)
