Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Not-repeated cross-sectional studies (except case control studies)
Database recruitment is carried out by an intermediary	A population file
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	Sampling plan: The 2007 census is used as the sampling frame to form the TeO sample. However, unlike immigrants, descendants of immigrants are not directly identifiable in the census. In fact, the census does not include variables providing information on parents' origin (place of birth or nationality). Therefore, an additional information source was required in order to select individuals that should be surveyed a priori as descendants of

natives, immigrants or natives from overseas départements. As such, the formation of the TeO survey sample relies on a complex matching operation between census data, the permanent demographic sample and the civil registry. The names and addresses of the individuals to be surveyed were extracted from the census; information on the individuals' ancestry (parents' place of birth) was obtained from the EDP and the civil registry.

Database objective

Main objective

The main objective of this survey is to describe the living conditions and social trajectories of different populations (immigrants, descendants of immigrants born in France, natives from overseas départements and descendants of these natives born in mainland France, as well as native descendants of natives); to investigate their access to resources and to describe their integration trajectory, regardless of origin.

Inclusion criteria

The scope of the survey includes people living in an ordinary household in mainland France. The sampling frame consists of individuals surveyed in 2007 and living in a master sample municipality. Immigrants and descendants of natives aged between 18 and 59 years old and descendants of immigrants aged between 18 and 49 years old were selected.

Population type

Age

Adulthood (19 to 24 years)
Adulthood (25 to 44 years)
Adulthood (45 to 64 years)

Population covered

General population

Gender

Male
Woman

Geography area

Detail of the geography area

Metropolitan France.

Data collection

Dates

Date of first collection (YYYY or MM/YYYY)

2008

Size of the database

Size of the database (number of individuals) Greater than 20 000 individuals

Details of the number of individuals 22,000

Data

Database activity Data collection completed

Type of data collected Declarative data

Declarative data (detail) Face to face interview

Presence of a biobank No

Health parameters studied Health event/morbidity
Health care consumption and services
Quality of life/health perception

Care consumption (detail) Medical/paramedical consultation

Procedures

Data collection method A researcher arranges meetings with the subjects to collect data through a digital questionnaire.

Participant monitoring No

Links to administrative sources Yes

Linked administrative sources (detail) census at the census block level (contextual data)

Promotion and access
