Main features

Type of database

Type of database Study databases

Study databases (details) Repeated cross-sectional studies (except case control studies)

Database recruitment is carried out by an intermediary A population file

Database recruitment is carried out as part of an interventional study No

Database objective

Main objective The first health survey was conducted in 1960-1961. The following surveys took place in 1970-1971, 1980-1981 and 1991-1992, and the last in 2002-2003. The objectives of the decennial health survey are: - to describe population health: reported morbidity and perceived health; - to provide quantitative data on health care usage and prevention (by volume and value); - to analyse health, health care usage and prevention in relation to sociodemographic characteristics (age, gender, profession ...) of individuals and their households.

Inclusion criteria French people from 11 years of age (for 2002-2003)

Population type

Age	Childhood (6 to 13 years) Adolescence (13 to 18 years) Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years) Elderly (65 to 79 years) Great age (80 years and more)
-----	--

Population covered	General population
--------------------	--------------------

Gender	Male Woman
--------	---------------

Geography area	National
----------------	----------

Detail of the geography area	Metropolitan France. The 2002-2003 Health Survey had five regional extensions in: - Nord-Pas-de-Calais; - Picardy; - Champagne-Ardenne; - Île-de-France; - Provence-Alpes-Côte d'Azur
------------------------------	---

Data collection

Dates

Date of first collection (YYYY or MM/YYYY)	1960
--	------

Date of last collection (YYYY or MM/YYYY)	2003
---	------

Size of the database

Size of the database (number of individuals)	Greater than 20 000 individuals
--	---------------------------------

Details of the number of individuals	40 900
--------------------------------------	--------

Data

Database activity	Data collection completed
-------------------	---------------------------

Type of data collected	Declarative data
------------------------	------------------

Declarative data (detail)	Paper self-questionnaire Face to face interview
---------------------------	--

Presence of a biobank	No
-----------------------	----

Health parameters studied	Health event/morbidity
---------------------------	------------------------

Health event/mortality
Health care consumption and services
Quality of life/health perception

Care consumption (detail)

Hospitalization
Medical/paramedical consultation
Medicines consumption

Procedures

Data collection method

Data collection is assisted by a micro hand-held computer (CAPI). The last Health Survey in 2002-2003 has added several "self-administered questionnaires" (questionnaires completed by individuals), widely used internationally, on perceived health, working conditions past and present, as well as the description of a number of diseases.

Participant monitoring

No
