Main features

Type of database

Type of database Study databases

Study databases (details) Not-repeated cross-sectional studies (except case control studies)

Database recruitment is carried out by an intermediary A selection of health care professionals
An administrative base or a register

Database recruitment is carried out as part of an interventional study No

Additional information regarding sample selection. Thirty general practitioners (10 per département), randomly selected from the Health Insurance database (AMELI) to have 60% men, 10% practising physicians in Sector 2, 30% in a rural setting and 20%, 40% and 40% in "affluent", "average" or "poor" areas respectively, as well as 30 specialists (gynaecologists, radiologists and gastroenterologists) were interviewed.

Database objective

Main objective To analyse the representation of healthcare professionals involved in cancer screening concerning social inequalities associated with cancer screening, the role of general practitioners in reducing these inequalities and possible screening developments organised by French cancer centres to overcome these inequalities.

Inclusion criteria - Men or women - general practitioner or specialist (gynaecology, radiology and gastroenterology)

Population type

Age
Adulthood (19 to 24 years)
Adulthood (25 to 44 years)
Adulthood (45 to 64 years)

Population covered
General population

Gender
Male
Woman

Geography area
Departmental

French regions covered by the database
Nord - Pas-de-Calais Picardie
Normandie

Detail of the geography area
Three Cancéropôle Northwest départements
(Manche, Nord and Seine-Maritime)

Data collection

Dates

Date of first collection (YYYY or MM/YYYY)
2011

Size of the database

Size of the database (number of individuals)
< 500 individuals

Details of the number of individuals
60

Data

Database activity
Data collection completed

Type of data collected
Declarative data

Declarative data (detail)
Face to face interview

Presence of a biobank
No

Health parameters studied
Health care consumption and services

Care consumption (detail)
Medical/paramedical consultation

Procedures

Data collection method
Interviews focussing on representations of social inequalities for participation in colorectal, breast and

cervical cancer screening (screening currently organised or planned).

Participant monitoring No
