

MINEURS D'URANIUM - Cohort Study of Uranium Miners in France

Head :Laurier Dominique, LABORATOIRE D'ÉPIDÉMIOLOGIE DES RADIATIONS DRPH/SRBE/LEPID IRSN INSTITUT DE RADIOPROTECTION ET DE SURETÉ NUCLÉAIRE (IRSN)

Leuraud Klervi, LABORATOIRE D'ÉPIDÉMIOLOGIE DES RADIATIONS DRPH/SRBE/LEPID IRSN INSTITUT DE RADIOPROTECTION ET DE SURETÉ NUCLÉAIRE (IRSN)

Rage Estelle, LABORATOIRE D'ÉPIDÉMIOLOGIE DES RADIATIONS DRPH/SRBE/LEPID IRSN INSTITUT DE RADIOPROTECTION ET DE SURETÉ NUCLÉAIRE (IRSN)

Last update : 08/12/2014 | Version : 2 | ID : 60014

General

Identification

Detailed name Cohort Study of Uranium Miners in France

Sign or acronym MINEURS D'URANIUM

CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency) authorisation CNIL dr-2010-404 (23/12/2010)

General Aspects

Medical area Cancer research
Cardiology
Pneumology

Health determinants Addictions
Occupation

Keywords Death, lung, cancer, radon, tobacco, alpha-risk, health, environment

Scientific investigator(s) (Contact)

Name of the director Laurier

Surname Dominique

Address 92262 FONTENAY AUX ROSES

Phone +33 (0)1 58 35 89 99

Email dominique.laurier@irsn.fr

Unit LABORATOIRE D'ÉPIDÉMIOLOGIE DES RADIATIONS

Main features

Type of database

Type of database Study databases

Study databases (details) Cohort study

Database recruitment is carried out by an intermediary A population file

Database recruitment is carried out as part of an interventional study No

Additional information regarding sample selection. Retrospective Other bodies active in creating this cohort: Cancer registry, Areva archives, Carmi. Inclusion cut-off date: 01/01/2001.

Database objective

Main objective Study on the increased risk of cancer, including lung cancer, after chronic exposure to ionising radiation, including alpha emitters (radon descendants, uranium dust). Professional cofactors and smoking are taken into account. Secondary objective: The cohort study benefits from high quality individual registration of exposure to various carcinogens on an annual basis, as well as long-term follow-up (over 20 years on average). All causes of death are recorded regularly. It is also possible to study risks other than cancer in this cohort, including the risk of cardiovascular or respiratory death. The extrapolation of risk per unit of exposure enables the assessment of low-dosage risk, at levels regularly encountered by some of the French population. This is especially true for the estimation of cancer risk per unit of radon exposure in the home.

Inclusion criteria Having worked at least 1 year in the CEA-Areva Uranium Mines

Population type

Age Adulthood (19 to 24 years)
Adulthood (25 to 44 years)
Adulthood (45 to 64 years)
Elderly (65 to 79 years)
Great age (80 years and more)
