Main features

Type of database

Type of database Study databases

Study databases (details) Not-repeated cross-sectional studies (except case
control studies)

Database recruitment is carried out by an intermediary A selection of health institutions and services

Database recruitment is carried out as part of an interventional study No

Database objective

Main objective To describe the management of threatened preterm delivery (TPD) in France 3 years after publication of the French guidelines and to analyse the factors of variation of the practices observed.

Inclusion criteria Women hospitalised for TPD (22-36 weeks of amenorrhea) during May 2005.

Population type

Age Adulthood (19 to 24 years)
Adulthood (25 to 44 years)

Population covered General population

Gender Woman

Geography area National

Detail of the geography area Representative sample of French maternity units. The study included 107 hospitals, accounting for 20% of all French maternity units.

Data collection

Dates

Date of first collection (YYYY or MM/YYYY) 05/2005

Size of the database

Size of the database (number of individuals) [500-1000[individuals

Details of the number of individuals 734

Data

Database activity Data collection completed

Type of data collected Clinical data
Declarative data

Clinical data (detail) Medical registration

Declarative data (detail) Paper self-questionnaire

Presence of a biobank No
