Main features

Type of database

Type of database	Study databases
------------------	-----------------

Study databases (details)	Not-repeated cross-sectional studies (except case control studies)
---------------------------	---

Database recruitment is carried out by an intermediary	A selection of health institutions and services
--	---

Database recruitment is carried out as part of an interventional study	No
--	----

Database objective	
Main objective	To describe the management of threatened preterm delivery (TPD) in France 3 years after publication of the French guidelines and to analyse the factors of variation of the practices observed.
Inclusion criteria	Women hospitalised for TPD (22-36 weeks of amenorrhea) during May 2005.
Population type	
Age	Adulthood (19 to 24 years) Adulthood (25 to 44 years)
Population covered	General population
Gender	Woman
Geography area	National
Detail of the geography area	Representative sample of French maternity units. The study included 107 hospitals, accounting for 20% of all French maternity units.
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	05/2005
Size of the database	
Size of the database (number of individuals)	[500-1000[individuals
Details of the number of individuals	734
Data	
Database activity	Data collection completed
Type of data collected	Clinical data Declarative data
Clinical data (detail)	Medical registration
Declarative data (detail)	Paper self-questionnaire
Presence of a biobank	No

Health parameters studied	Health event/morbidity Health event/mortality
Procedures	
Participant monitoring	No
Links to administrative sources	No
Promotion and access
