Procedures

Data collection method	Data collected during spontaneous patients visits at inclusion and then at about 2 and 6 months. Data collected during each visit consists into a Sheehan disability scale at inclusion and at 6 months visits, filled by the patients, and a MADRS scale (depression severity) filled by the investigator. Patients meeting eligibility criteria and not included in the study are inscribed into a non-inclusion register which will allow to verify the representativeness of population included in the study. This register needs to be completed until the effective inclusion of 4 to 5 patients in the cohort.
Participant monitoring	Yes
