Main features

Type of database

Type of database Study databases

Study databases (details) Longitudinal study (except cohorts)

Database recruitment is carried out by an intermediary A selection of health care professionals

Database recruitment is carried out as part of an interventional study No

Additional information regarding sample selection. A maximum of 5 consecutive patients per 350 randomly-drawn rheumatologists

Database objective

Main objective Evaluation of the frequency of extra-articular manifestations and more specifically of uveitis in patients with a spondylarthropathy

Inclusion criteria Patients suffering from a spondylarthropathy

Population type

Age Adulthood (19 to 24 years)
Adulthood (25 to 44 years)
Adulthood (45 to 64 years)

Population covered Sick population

Gender Male
Woman

Geography area National

Detail of the geography area National

Data collection

Dates

Date of first collection (YYYY or MM/YYYY) 2008

Date of last collection (YYYY or MM/YYYY) 2010

Size of the database

Size of the database (number of individuals) [500-1000[individuals

Details of the number of individuals 900

Data

Database activity Data collection completed

Type of data collected
Clinical data
Declarative data
Paraclinical data
Biological data
Administrative data

Clinical data (detail) Direct physical measures

Declarative data (detail) Paper self-questionnaire

Paraclinical data (detail) Radiological sacroiliitis

Biological data (detail) HLA B27 antigen

Administrative data (detail) sociodemographic characteristics

Presence of a biobank No

Health parameters studied Health event/morbidity

Procedures

Data collection method liberal rheumatology

Classifications used CIM 10

Participant monitoring No

Links to administrative sources No
