## Additional contact

## Main features

### Type of database

Type of database

Study databases

Study databases (details)

Longitudinal study (except cohorts)

Database recruitment is carried out by an intermediary

A selection of health care professionals

Database recruitment is carried out as part of an interventional study

No

Additional information regarding sample selection.

A maximum of 5 consecutive patients per 350 randomly-drawn rheumatologists

## Database objective

Main objective

Evaluation of the frequency of extra-articular manifestations and more specifically of uveitis in patients with a spondylarthropathy

Inclusion criteria

Patients suffering from a spondylarthropathy

## Population type

Age

Adulthood (19 to 24 years)

Adulthood (25 to 44 years)

Adulthood (45 to 64 years)

Population covered

Sick population

Gender

Male

Woman

Geography area

National

Detail of the geography area

National

## Data collection

## Dates

Date of first collection (YYYY or MM/YYYY) 2008

Date of last collection (YYYY or MM/YYYY) 2010

## Size of the database

Size of the database (number of individuals) [500-1000[ individuals

Details of the number of individuals 900

## Data

Database activity Data collection completed

Type of data collected Clinical data  
Declarative data  
Paraclinical data  
Biological data  
Administrative data

Clinical data (detail) Direct physical measures

Declarative data (detail) Paper self-questionnaire

Paraclinical data (detail) Radiological sacroiliitis

Biological data (detail) HLA B27 antigen

Administrative data (detail) sociodemographic characteristics

Presence of a biobank No

Health parameters studied Health event/morbidity

## Procedures

Data collection method liberal rheumatology

Classifications used CIM 10

Participant monitoring No

Links to administrative sources No
