Main features

Type of database

Type of database Study databases

Study databases (details) Cohort study

Database recruitment is carried out by an intermediary A selection of health institutions and services

Database recruitment is made on the basis of: Medication(s) taken

Database recruitment is carried out as part of an interventional study No

Additional information regarding sample selection. Prospective Other bodies active in creating this cohort: PIERRE-YVES SCARABIN; GENEVIEVE PLU BUREAU; JACQUELINE CONARD; MARIE-HELENE HORELLOU.

Database objective

Main objective To investigate the impact of transdermal oestrogens and other menopause treatments on the risk of recurrent venous thrombosis.

Inclusion criteria Menopausal women aged between 45 and 70 years old attending Hôtel-Dieu Hospital for the first documented instance of a venous thrombotic event (Doppler ultrasound, angiography scan, angiogram etc.) and/or thrombophilia (factor V Leiden, 20210a mutation, ATIII deficiency, PC, PS).

Population type

| | |
|--|--|
| Age | Adulthood (45 to 64 years) Elderly (65 to 79 years) |
| Population covered | Sick population |
