Main features

Type of database

Type of database	Study databases
Study databases (details)	Longitudinal study (except cohorts)

Database recruitment is carried out by an intermediary	A population file
--	-------------------

Database recruitment is carried out as part of an interventional study	No
--	----

Database objective

Main objective	The purpose of the Alcoroute survey was to analyze what is currently going on in the ANPAA care structures for drinking drivers, i.e.: what is their typology? What is their future in the care structures? What consumption modifications are observed in terms of treatment
----------------	---

Inclusion criteria	The subjects studied were those consulting for "driving while intoxicated" in participating Alchology ambulatory cure centers (CCAA) and who were consulting for the first time either spontaneously or sent by justice.
--------------------	--

Population type

Age	Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years) Elderly (65 to 79 years)
-----	--

Population covered	General population
--------------------	--------------------

Gender	Male Woman
--------	---------------

Geography area	National
----------------	----------

Detail of the geography area	France
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	2004
Date of last collection (YYYY or MM/YYYY)	2005
Size of the database	
Size of the database (number of individuals)	[500-1000[individuals
Details of the number of individuals	1086
Data	
Database activity	Data collection completed
Type of data collected	Clinical data Declarative data
Clinical data (detail)	Medical registration
Declarative data (detail)	Face to face interview
Presence of a biobank	No
Health parameters studied	Health care consumption and services
Care consumption (detail)	Medical/paramedical consultation
Procedures	
Data collection method	via dossier
Classifications used	Alcoholic typology evaluated according to the classification proposed by the French alcoholology society
Participant monitoring	Yes
Details on monitoring of participants	When follow-up was proposed at the end of the initial assessment, the alcoholic data was collected at each consultation for a maximum period of 12 months.
