Main features

Type of database

Type of database Study databases

Study databases (details) Not-repeated cross-sectional studies (except case control studies)

Database recruitment is carried out by an intermediary A selection of health care professionals

Database recruitment is carried out as part of an interventional study No

Additional information regarding sample selection. 1,187 patients were selected by 208 urologists and radiotherapists.

Database objective

Main objective To define professional practices for urologists and radiotherapists regarding the use of hormonal therapy in prostate cancer.

Inclusion criteria

- male and female
- adult
- prostate cancer patient

Population type

Age

- Adulthood (19 to 24 years)
- Adulthood (25 to 44 years)
- Adulthood (45 to 64 years)

Population covered Sick population

Gender

- Male
- Woman

Geography area National

Detail of the geography area Metropolitan France

Data collection

Dates

Date of first collection (YYYY or MM/YYYY) 03/2006

Date of last collection (YYYY or MM/YYYY) 10/2007

Size of the database

Size of the database (number of individuals) [1000-10 000[individuals

Details of the number of individuals 1,187

Data

Database activity Data collection completed

Type of data collected Biological data

Biological data (detail) Average Gleason score at baseline was 7.1 with PSA at 87.2 ng/ml

Presence of a biobank No

Health parameters studied Health event/morbidity
Health event/mortality

Procedures

Participant monitoring No

Links to administrative sources No
