Main features

Type of database

Type of database Study databases

Study databases (details) Not-repeated cross-sectional studies (except case control studies)

Database recruitment is carried out by an intermediary An administrative base or a register

Database recruitment is carried out as part of an interventional study No

Additional information regarding sample selection. A random sample of 1,340 ambulatory general practitioners were selected from the electronic "Union Régionale des Médecins Libéraux" (Regional Union of Independent Physicians) database.

Database objective

Main objective To assess whether conducting urine-based toxicity screening tests in the general practitioner's surgery improves treatment for drug-substituted patients.

Inclusion criteria General practitioners exclusively practising in ambulatory care in the Midi-Pyrénées region.

Population type

Age Adulthood (25 to 44 years)
Adulthood (45 to 64 years)

Population covered General population

Gender Male
Woman

Geography area Regional

French regions covered by the Languedoc-Roussillon Midi-Pyrénées

database

Detail of the geography area Midi-Pyrénées region.

Data collection

Dates

Date of first collection (YYYY or MM/YYYY) 2009

Date of last collection (YYYY or MM/YYYY) 2010

Size of the database

Size of the database (number of individuals) < 500 individuals

Details of the number of individuals 496

Data

Database activity Data collection completed

Type of data collected Declarative data

Declarative data (detail) Paper self-questionnaire

Details of collected declarative data Questionnaire sent to physician by post.

Presence of a biobank No

Health parameters studied Health event/morbidity
Health care consumption and services

Care consumption (detail) Medical/paramedical consultation
Medicines consumption

Procedures

Data collection method Questionnaire sent by post with a prepaid return envelope to physicians included in the sample.

Participant monitoring No

Links to administrative sources No
