

# NutriMay - Food, Nutrition and Health in Mayotte: 2006 NutriMay Study

Head : Deschamps Valerie, Unité de surveillance et d'épidémiologie nutritionnelle

Last update : 09/05/2017 | Version : 1 | ID : 7763

General	
Identification	
Detailed name	Food, Nutrition and Health in Mayotte: 2006 NutriMay Study
Sign or acronym	NutriMay
CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency) authorisation	CNIL No. 906015 (23/02/2006).
General Aspects	
Medical area	Endocrinology and metabolism Pediatrics
Pathology (details)	Food supply, individual food consumption, physical activity and inactivity, growth, body mass.
Health determinants	Lifestyle and behavior Nutrition Social and psychosocial factors
Keywords	food consumption, child health, breastfeeding, underweight, stunted growth, low weight, overseas département, 24-hour recalls, nutrition, Mayotte, excess weight, obesity, hypertension, diabetes, physical activity, physical inactivity, insecurity, body mass
Scientific investigator(s) (Contact)	
Name of the director	Deschamps
Surname	Valerie
Address	74 rue Marcel Cachin, 93017 Bobigny Cedex
Phone	+ 33 (0)1 48 38 89 11
Email	valerie.deschamps@univ-paris13.fr

Unit	Unité de surveillance et d'épidémiologie nutritionnelle
Organization	INVS-Institut de Veille
Collaborations	
Participation in projects, networks and consortia	Yes
Details	Paris 13 University
Funding	
Funding status	Public
Details	InVS
Governance of the database	
Sponsor(s) or organisation(s) responsible	INVS-Institut de Veille Sanitaire
Organisation status	Public
Presence of scientific or steering committees	No
Additional contact	
Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Not-repeated cross-sectional studies (except case control studies)
Database recruitment is carried out by an intermediary	A population file
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	Participants were recruited through two-stage random sampling (clusters followed by households), stratified by socio-economic cluster level based on INSEE clusters. 0-4 year-old children and women of childbearing age were included in all randomly selected households to be over-

represented. However, children aged 5-14 years old and other adults (men aged 15 and older and women aged 50 and older), were included in one in two households.

## Database objective

Main objective	To describe food consumption, physical activity and nutrition status of the population living in Mayotte, with particular focus on children under 5 years old and women of childbearing age.
----------------	--

Inclusion criteria	Individuals living in an ordinary household in Mayotte and capable of understanding the aims of the study.
--------------------	--

## Population type

Age	Newborns (birth to 28 days) Infant (28 days to 2 years) Early childhood (2 to 5 years) Childhood (6 to 13 years) Adolescence (13 to 18 years) Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years) Elderly (65 to 79 years) Great age (80 years and more)
-----	--

Population covered	General population
--------------------	--------------------

## Pathology

Gender	Male Woman
--------	---------------

Geography area	Departmental
----------------	--------------

Detail of the geography area	Mayotte
------------------------------	---------

## Data collection

### Dates

Date of first collection (YYYY or MM/YYYY)	05/2006
--	---------

Date of last collection (YYYY or MM/YYYY)	10/2006
---	---------

## Size of the database

Size of the database (number of	[500-1000[ individuals
---------------------------------	------------------------

individuals)

Details of the number of individuals

969 individuals enrolled from 315 randomly selected ordinary households (household participation rate: 95.7%)

## Data

Database activity

Data collection completed

Type of data collected

Declarative data  
Paraclinical data

Declarative data (detail)

Face to face interview

Paraclinical data (detail)

---

Presence of a biobank

No

Health parameters studied

Health event/morbidity  
Others

Other (detail)

Anthropometry, blood pressure.

## Procedures

Data collection method

Data collection was realised at participants' homes in face-to-face interviews conducted by specially trained researchers. A questionnaire on housing characteristics was also completed by the household contact person. Anthropometric measurements and blood pressure were also taken. Individual food consumption data were collected using two 24-hours recalls conducted face-to-face. The first recall on the day of the first visit and the second recall one month later.

Quality procedure(s) used

Internal unit procedures.

Participant monitoring

No

Followed pathology

Links to administrative sources

No

## Promotion and access

### Promotion
