Main features

Type of database

Type of database Study databases

Study databases (details) Not-repeated cross-sectional studies (except case control studies)

Database recruitment is carried out by an intermediary A population file

Database recruitment is carried out as part of an interventional study No

Additional information regarding sample selection. 3-stage sampling: 1/ municipalities or groups of municipalities (190) stratified by urban unit size and

8 major regions; 2/ households from phone lists (landlines, red lists, mobile phones and unbundled); 3/ 1 individual per household, adult or child, using the birthday method.

Database objective

Main objective

To describe food consumption, physical activity and nutrition of children and adults from a representative sample of the population living in France between 2006-2007.

Inclusion criteria

Adults:

- Residing in metropolitan France during the study period (February 2006 to January 2007);
- Between 18 and 74 years old;
- Residing in an ordinary household with a landline or mobile phone;
- Living at least 5 days a week in the randomly selected household;
- Able to understand the primary implications of participating in the study by phone (hearing, understanding of French, no mental illness);
- Not suffering from a disease requiring enteral and parenteral artificial feeding;
- Agreed to participate in at least one part of the two-part study (food or clinical and biological assessment).

Children:

- Residing in metropolitan France during the study period (February 2006 to January 2007);
- Between 3 and 17 years old;
- Residing in an ordinary household with a landline or mobile phone;
- Living at least 5 days a week in a randomly selected household;
- Able to understand (child and child's guardian) the major implications of participating in the study by phone (hearing, understanding of French, no mental illness);
- Not suffering from a disease requiring enteral and parenteral artificial feeding;
- Agreed to participate in at least one part of the two-part study (food or clinical and biological assessment).

Population type

Age

Early childhood (2 to 5 years)
Childhood (6 to 13 years)
Adolescence (13 to 18 years)
Adulthood (19 to 24 years)

Adulthood (25 to 44 years)
Adulthood (45 to 64 years)
Elderly (65 to 79 years)

Population covered General population

Pathology

Gender Male
 Woman

Geography area National

Detail of the geography area Metropolitan France excluding Corsica island

Data collection

Dates

Date of first collection (YYYY or MM/YYYY) 02/2006

Date of last collection (YYYY or MM/YYYY) 07/2007

Size of the database

Size of the database (number of individuals) [1000-10 000[individuals

Details of the number of individuals 3,115 adults (18-74 years old), 1,675 children (3-17 years old).

Data

Database activity Data collection completed

Type of data collected Paraclinical data
 Biological data

Paraclinical data (detail) Weight, height, waist and hip measurement, blood pressure.

Biological data (detail) Glucose, HbA1c, cholesterol, triglycerides, iron level, folates, vitamins, etc.

Presence of a biobank Yes

Contents of biobank Whole blood
 Serum
 Plasma
 Fluids (saliva, urine, amniotic fluid, ?)

Details of biobank content	---
Health parameters studied	Health event/morbidity Others
Other (detail)	Biological nutritional status markers (body mass, vitamin and micronutrient status, blood pressure, dyslipidemia, etc.).
Procedures	
Data collection method	- Initial contact by telephone (household composition, random selection); - Face-to-face questionnaire at home and distribution of self-administered questionnaire; - Three recalls of 24 hours food consumption, by telephone - health examination at home (carried out by a nurse) or in an examination clinic.
Classifications used	INSEE for marginal calibration data.
Quality procedure(s) used	Internal unit procedures.
Participant monitoring	No
Followed pathology	
Links to administrative sources	No
Promotion and access	
Promotion
