## Additional contact

## Main features

## Type of database

Type of database

Study databases

Study databases (details)

Repeated cross-sectional studies (except case control studies)

Database recruitment is carried out by an intermediary

A selection of health institutions and services

Database recruitment is carried out as part of an interventional study

No

Additional information regarding sample selection.

Sampling method: Comprehensive, 1 month given, in 3 institution types: - Institutions specialising in the reception and treatment of drug users - health care institutions - social intervention institutions for the prevention, orientation and accommodation of drug users

## Database objective

Main objective

- To assess the number of drug users who turn to social and health institutions;
- To improve knowledge of socio-demographic characteristics, consumption;
- To help in the decision and development of treatment policies for the population of drug users seeking treatment;

Inclusion criteria

Inclusion of treatment centres:

- Institutions specialising in the reception and treatment of drug users
- health facilities: General public hospitals or specialising in psychiatry, private psychiatric hospitals in the public sector and nursing homes for mental illness

- social institutions involved in the prevention, counselling or accommodation of drug users.

All patients present in these institutions are included in the survey.

## Population type

Age  
Adulthood (19 to 24 years)  
Adulthood (25 to 44 years)  
Adulthood (45 to 64 years)

Population covered  
General population

Gender  
Male  
Woman

Geography area  
National

Detail of the geography area  
France (Including Overseas Départements)

## Data collection

### Dates

Date of first collection (YYYY or MM/YYYY)  
1987

Date of last collection (YYYY or MM/YYYY)  
11/2003

### Size of the database

Size of the database (number of individuals)  
Greater than 20 000 individuals

Details of the number of individuals  
33000 (2003)

## Data

Database activity  
Data collection completed

Type of data collected  
Clinical data  
Declarative data  
Biological data

Clinical data (detail)  
Direct physical measures

Declarative data (detail)  
Face to face interview

Biological data (detail)  
HCV and HIV serology tests.

Presence of a biobank	No
Health parameters studied	Health care consumption and services
Care consumption (detail)	Hospitalization Medical/paramedical consultation Medicines consumption
<b>Procedures</b>	
Data collection method	Annual collection until 1997 - Bi-or triennial following this (1999 and 2003). The questionnaire is completed by the staff of host institutions. The DRASS statistical services then ensure the collection, entry and control of questionnaires in their region. The DREES "État de santé de la population" office manages the maintenance of the survey and the implementation at national level.
Participant monitoring	No
Links to administrative sources	No
