Collaborations	
Participation in projects, networks and consortia	Yes
Funding	
Funding status	Public
Details	National Fund for Prevention, Education and Health Information
Governance of the database	
Sponsor(s) or organisation(s) responsible	CPAM Health Examination Centre, Rhône
Organisation status	Public
Additional contact	
Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Cohort study
Database recruitment is carried out by an intermediary	A selection of health institutions and services An administrative base or a register

Base or register (detail)	Subjects over 65 years of age from the French health insurance system.
Database recruitment is carried out as part of an interventional study	Yes
Details	Performed at individual level
Database objective	
Main objective	The main aim of the study is to assess the predictive values (PV) of three tests for diagnosing mild cognitive impairments, balance and disorders in elderly individuals who are alive. The secondary aim is the assess the relationship between falls and cognitive impairment.
Inclusion criteria	Subjects consulting at one of 3 health examination centres (Lyon, Angers and Saint-Etienne) for a free, periodic medical examination. 65 years old or over; living at home or in a non-medical institution. Volunteers participating in a periodic medical examination and presenting with a memory complaint (identified either by the patient or by a member of his/her family).
Population type	
Age	Elderly (65 to 79 years) Great age (80 years and more)
Population covered	Sick population
Gender	Male Woman
Geography area	Local
French regions covered by the database	Auvergne Rhône-Alpes Pays de la Loire
Detail of the geography area	Lyon, Angers, Saint-Étienne
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	2009
Date of last collection (YYYY or	2011

MM/YYYY)

Size of the database

Size of the database (number of individuals) [500-1000] individuals

Details of the number of individuals 620

Data

Database activity Data collection completed

Type of data collected
Clinical data
Declarative data
Paraclinical data

Clinical data (detail) Medical registration

Details of collected clinical data
Weight; height; number of various therapeutic groups; psychotropic dose (established by asking the patient or by consulting their last prescription); independence (assessed by testing 4 activities of daily living) and mood (mini GDS).
Neuropsychological assessment; cognitive tests.

Declarative data (detail) Paper self-questionnaire
Face to face interview

Details of collected declarative data
Sociodemographic data (age, marital status, address, economic wealth and level of vulnerability ? EPICES score).

Paraclinical data (detail) Visual acuity; balance and walking assessment; patient sensitivity and proprioception; hand-grip test; unipodal position evaluation; chair rising; temporal analysis of walking and posture analysis.

Presence of a biobank No

Health parameters studied Health event/morbidity

Procedures

Participant monitoring Yes

Details on monitoring of participants Follow-up 1 year after enrolment.
