

- Case-Control Study on the Relation Between Systemic Sclerosis and Occupational Exposure

Head :Marie Isabelle, INSERM U 905

Last update : 01/01/2018 | Version : 1 | ID : 73181

General	
Identification	
Detailed name	Case-Control Study on the Relation Between Systemic Sclerosis and Occupational Exposure
CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency) authorisation	Approval: CPP Upper Normandy
General Aspects	
Medical area	Immunology
Pathology (details)	Systemic sclerosis
Health determinants	Lifestyle and behavior Occupation Pollution
Keywords	crystalline silica, keytones, occupational exposure, solvents, scleroderma, smoking, tobacco
Scientific investigator(s) (Contact)	
Name of the director	Marie
Surname	Isabelle
Email	isabelle.marie@chu-rouen.fr
Unit	INSERM U 905
Organization	Rouen University Hospital
Collaborations	
Funding	
Funding status	Mixed

Details	Ministry of Health, Rouen University Hospital, Pfizer Pharmaceutical Laboratory
Governance of the database	
Sponsor(s) or organisation(s) responsible	Rouen University Hospital
Organisation status	Public
Additional contact	
Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Case control study
Database recruitment is carried out by an intermediary	A selection of health institutions and services
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	Matching case-control by gender, age and smoking habits.
Database objective	
Main objective	The aim of the study is to investigate the relation between systemic sclerosis and occupational exposure, and to define the risk of systemic sclerosis in male and female patients that is linked to occupational exposure.
Inclusion criteria	<p>Patients with systemic sclerosis (declared) consulting at one of 3 participating centres (Departments of Internal Medicine, Dermatology and Pneumology in Rouen, Elbeuf and Le Havre) between 2005 and 2008.</p> <p>Controls: Subjects with a chronic illness or an acute illness who do not have: a connective tissue disorder; systemic vasculitis and other systemic autoimmune disorders; neoplasia and chronic interstitial lung disease.</p>
Population type	
Age	<p>Adulthood (19 to 24 years)</p> <p>Adulthood (25 to 44 years)</p>

Adulthood (45 to 64 years)
Elderly (65 to 79 years)
Great age (80 years and more)

Population covered	Sick population
Gender	Male Woman
Geography area	Regional
French regions covered by the database	Normandie
Detail of the geography area	Upper Normandy
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	2005
Date of last collection (YYYY or MM/YYYY)	2008
Size of the database	
Size of the database (number of individuals)	< 500 individuals
Details of the number of individuals	100 cases/300 controls
Data	
Database activity	Data collection completed
Type of data collected	Declarative data
Declarative data (detail)	Face to face interview
Details of collected declarative data	1) Socioeconomic characteristics; 2) smoking habits; 3) prior use of drugs already implicated in the development of scleroderma e.g. anorexigens, pentazocine, bromocriptine, taxanes and L-tryptophan; 4) history of: prosthesis (e.g. hip, knee); contact lenses, cosmetic surgery (parrafin, processed petroleum jelly, silicone implants) and hair dye, as well as 5) occupational history. Exposure to crystalline silica, white spirits, solvents (chlorinated solvents, trichlorethylene, toluene,

xylenes, ketones aromatic solvents, all types), welding fumes, epoxy resins; pesticides and vinyl chloride.

Presence of a biobank

No

Health parameters studied

Health event/morbidity

Procedures

Data collection method

Data is collected by an investigator and for expert committee submissions.

Participant monitoring

No

Links to administrative sources

No

Promotion and access

Promotion
