

CSF - Cross-sectional study on the context of Sexuality in France

Head :Bajos Nathalie, Inserm CESP U1018, team 7
Bozon Michel

Last update : 10/19/2017 | Version : 1 | ID : 1169

General	
Identification	
Detailed name	Cross-sectional study on the context of Sexuality in France
Sign or acronym	CSF
CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency) authorisation	CNIL
General Aspects	
Medical area	Disability/handicap Gynecology/ obstetrics Infectious diseases
Pathology (details)	socio-demographics
Health determinants	Addictions Lifestyle and behavior Occupation Social and psychosocial factors
Keywords	relationships, STIs, sexual and reproductive health, HIV, contraception, elective abortion
Scientific investigator(s) (Contact)	
Name of the director	Bajos
Surname	Nathalie
Address	Inserm CESP U1018, team 7 82 rue du Général Leclerc 94276 Le Kremlin-Bicêtre Cedex
Phone	+33 (0)1 45 21 23 47

Email	nathalie.bajos@inserm.fr
Unit	Inserm CESP U1018, team 7
Organization	INSERM
Name of the director	Bozon
Surname	Michel
Address	Institut National d'Etudes Démographiques 133, boulevard Davout 75980 Paris Cedex 20 France
Phone	33(0) 1 56 06 21 20
Email	booz@ined.fr
Organization	INED
Collaborations	
Funding	
Funding status	Public
Details	INSERM CESP
Governance of the database	
Sponsor(s) or organisation(s) responsible	INSERM
Organisation status	Public
Sponsor(s) or organisation(s) responsible	INED
Organisation status	Public
Additional contact	
Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Not-repeated cross-sectional studies (except case control studies)

Database recruitment is carried out by an intermediary	A population file
Additional information regarding sample selection.	<p>Probability sample. The selection of individuals is based on a two-phase random sample with a post-stratification based on age. A complex sampling procedure was used to establish a sample of telephone contact information covering those enrolled on a whitelist and a blocked list.</p> <p>Furthermore, in order to guarantee the maximum representativeness of the full sample, individuals who only had cell phones were also included in the sample. Once the household was reached, the second phase consisted of selecting, using the birthday method, the individual to be questioned at the time of the telephone call out of all of the eligible adults between 18 and 69 years of age living in this residence.</p>

Database objective

Main objective	<p>The "Context of Sexuality in France" (CSF) survey took a broad perspective. It includes the three components of sexuality (acts, relationships and meanings), while simultaneously recording them in individual trajectories, in the social context, life circumstances and forms of the reports between men and women. A "Health and Sexuality" approach was prioritised to consider HIV infection as well as contraception, elective abortions, STIs (sexually transmitted infections), sexual violence, dysfunction and other sexual problems. The survey also includes an epidemiological extension aimed at studying, for the first time in France, the prevalence of Chlamydia Trachomatis infection and the risk factors for contamination.</p>
----------------	---

Inclusion criteria	<p>Every person between 18 and 69 years of age living in metropolitan France and able to understand the French language well enough to answer the telephone questionnaire was eligible. Youths under 18 years of age were not included in the survey. One of the reasons is the possible presence of parents, whose prior authorisation is necessary. In effect, the presence of parents may lead underage children to provide answers that do not match the reality of their emotional and sexual lives. Several foreign surveys have limited the age of inclusion to 45 years. The CSF survey sample extends the limit to 69 years in order to study how the population manages its emotional and sexual life in a context of prolonged sexual life.</p>
--------------------	--

Population type	
Age	Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years)
Population covered	General population
Pathology	
Gender	Male Woman
Geography area	National
Detail of the geography area	Metropolitan France
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	09/2005
Date of last collection (YYYY or MM/YYYY)	03/2006
Size of the database	
Size of the database (number of individuals)	[10 000-20 000[individuals
Details of the number of individuals	12364
Data	
Database activity	Current data collection
Type of data collected	Declarative data Biological data
Declarative data (detail)	Phone interview
Details of collected declarative data	a. Quality of life indicators. . Health care consumption. Sexual and reproductive health. Occupational health. Substance abuse.
Biological data (detail)	screening by urinary self-sampling (men) or genital self-sampling (women) for Chlamydia Trachomatis infection

Presence of a biobank	No
Health parameters studied	Health event/morbidity Health care consumption and services Quality of life/health perception
Care consumption (detail)	Medical/paramedical consultation Medicines consumption
Procedures	
Data collection method	Telephone questionnaire
Classifications used	Nomenclature used for the sociodemographic variables
Participant monitoring	No
Followed pathology	
Links to administrative sources	No
Promotion and access	
Promotion	
Access	
Terms of data access (charter for data provision, format of data, availability delay)	The "Context of Sexuality in France" (CSF) survey database will be made available for free access starting in March 2011. Until then, researchers who wish to use the CSF database should send a study protocol to the scientific supervisors of the CSF survey. Once the protocol is validated, a member of the CSF survey scientific team is designated as a point of contact. The researchers should then sign an agreement in which they agree: ? not to provide the digital files to any other researcher or research team and not to use them to train students until March 2011; ? to only publish results corresponding to the project submitted to the CSF team. Any other analysis should be the subject of a new project and a validation by the entire CSF team. ? to send the CSF team, for feedback, a final version of the article before it is submitted to a journal; ? to note the organisations that have financed the survey in every paper submitted.
Access to aggregated data	Access on specific project only
Access to individual data	Access on specific project only
