

Ré-Conf-ISS - Réunion Island, Lockdown, Social Inequalities in Health

Head :FIANU Adrian, CIC1410 / EQUITY (CERPOP)

Last update : 11/02/2022 | Version : 1 | ID : 73833

General

Identification

Detailed name Réunion Island, Lockdown, Social Inequalities in Health

Sign or acronym Ré-Conf-ISS

CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency) authorisation RNIPH, MR-004, INDS (MR 5219300420)

General Aspects

Medical area Psychology and psychiatry

Study in connection with Covid-19 Yes

Health determinants Geography
Social and psychosocial factors

Keywords housing conditions, self-reported health, social and geographic epidemiology, Réunion island, phone survey, Covid-19 epidemic context, residential district deprivation level

Scientific investigator(s) (Contact)

Name of the director FIANU

Surname Adrian

Address CIC de la Réunion - CHU Sud Réunion BP350 97748 St-Pierre Cedex

Phone +262 (0) 262 35 90 00

Email adrian.fianu@chu-reunion.fr

Unit CIC1410 / EQUITY (CERPOP)

Organization INSERM / CHU de la Réunion

Collaborations

Participation in projects, networks and consortia No

Others This public health research project involves a scientific partnership both with the EQUITY team from the UMR1295 in Toulouse (CERPOP - Centre d'Epidémiologie et de Recherche en santé des POPulations) and the Indian Ocean Regional Observatory of Health (ORS).

Funding

Funding status Public

Details ANR Recherche-Action Covid-19 (wave 8)

Governance of the database

Sponsor(s) or organisation(s) responsible CHU de la Réunion

Organisation status Public

Presence of scientific or steering committees Yes

Labelling and database evaluation The research project Ré-Conf-ISS was validated by the Covid-19 Scientific Restricted Board of the Réunion's CHU on 30th April 2020. The same day, the study was registered on the public directory of the INDS under the number MR 5219300420, and on the internal directory of the Data Protection Officer (DPO) of the Réunion's CHU. These regulatory proceedings were done with the help of the project manager of the Réunion's CHU DRCl.

Main features

Type of database

Type of database	Study databases
Study databases (details)	Not-repeated cross-sectional studies (except case control studies)

Database recruitment is carried out by an intermediary

A population file

Database recruitment is made on the basis of:

Another treatment or procedure

Database recruitment is carried out as part of an interventional study

No

Additional information regarding sample selection.

The Ré-Conf-ISS study planned to enroll a statistical sample of 900 adult persons selected via the telephone directory within the 114 major Réunion districts as defined by the Insee Réunion-Mayotte, following the quotas of adult inhabitants for these main districts and their deprivation level (Besson 2018).

Database objective

Main objective	<p>Primary objective:</p> <p>To describe, just after the lockdown implemented for tackling SARS-Cov-2 epidemic, the self-reported state of health of the Reunionese population according to the residential district deprivation level.</p> <p>Secondary objectives:</p> <ul style="list-style-type: none"> - To describe, just after the lockdown event, the self-reported state of health of the Reunionese population according to the housing conditions experienced during the lockdown. - To describe, just after the lockdown event, the self-reported state of health of the Reunionese population according to the individual socioeconomic characteristics: age class and gender, employment status and socioprofessional
----------------	---

category, education level.

- To compare the self-reported general stress level between the regional studies conducted on Réunion island: during the lockdown event (Confin-Aou study) versus after the lockdown event (Ré-Conf-ISS study).

- To compare the psychologic impact of the lockdown event between France main land and Réunion island using the results from the Epidemic national survey and the Ré-Conf-ISS regional survey respectively.

Inclusion criteria	<ul style="list-style-type: none">- Major (aged 18 years and older)- Living on the island before 17 March 2020- Stayed on the Réunion territory within all through the lockdown event (between March 17th and May 11th)- Without curatorship
Population type	
Age	Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years) Elderly (65 to 79 years) Great age (80 years and more)
Population covered	General population
Pathology	
Gender	Male Woman Other
Geography area	Regional
French regions covered by the database	La Réunion
Detail of the geography area	Enrollment of the 900 participants within the 114 reunionesse major districts as defined by the Insee Réunion-Mayotte in 2018
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	05/2020

Date of last collection (YYYY or MM/YYYY)	07/2020
Size of the database	
Size of the database (number of individuals)	[500-1000[individuals
Details of the number of individuals	900
Data	
Database activity	Data collection completed
Type of data collected	Declarative data Administrative data
Declarative data (detail)	Phone interview
Details of collected declarative data	The questionnaire used for the phone interview have 115 items. It comprises 7 general chapters: the individual socio-economic characteristics (education level, employment status, socioprofessional category, financial difficulties during lockdown), housing, equipment, environment close to the habitat occupied during the lockdown, the exposure to the epidemic, the psychological state (stress, anxiety, social relationships and activities during lockdown), the addictive behaviors and lifestyle, nutritional status and physical activity, as well as the healthcare use. Two specific chapters deal with potentially vulnerable sub-populations: the children health reported by the co-enrolled parent and intimate partner violence. The study main outcome is the level of stress since the beginning of the confinement period measured on a scale from 0 (total absence of stress) to 10 (maximum imaginable stress).
Administrative data (detail)	Commune, postcode and residential major district
Presence of a biobank	No
Health parameters studied	Health event/morbidity Health care consumption and services
Care consumption (detail)	Medical/paramedical consultation
Procedures	
Data collection method	In the course of progressive deconfinement, a one-

shot telephonic cross-sectional survey conducted on a 900 individuals sample drawn from the Reunionese population has been implemented since May 13, 2020, to describe the participants state of health according to their socioeconomic characteristics.

Classifications used

Common nomenclatures: major district, typology of reunionese major districts deprivation level and socioprofessional category by the Insee. Special nomenclatures: to promote the comparison of findings between epidemiological studies, shared items were chosen from national research (Epidemic) and regional research (Confin-Aou): sociodemography, living and working conditions during the lockdown event, exposure to the SARS-Cov-2 epidemic, psychologic impact and addictive behaviours.

Quality procedure(s) used

This study was designed and conducted by the clinical investigation center of la Réunion (CIC1410). Phone data collection layed on its survey platform comprising 3 creole-speaking investigators. This platform was reinforced by the enrollment of 2 temporary workers. The database development was done by a datamanager of the team using the Ennov Clinical® software. Data hosting is ISO 9001:2008 certified. It integrates its customers' applications in a datacenter located on two mirror sites (Poitiers and Roubaix) offering optimal security conditions. Access to the datacenter is strictly controlled, uninterrupted power supply is guaranteed, weather conditions are controlled and a fire safety system is included (regularly updated and checked). The servers are protected by a firewall and an updated anti-virus system. Customer data is managed in strict compliance with the rules of confidentiality, access is controlled by SSL certificate and all exchanges are encrypted. Ennov Clinical® complies with FDA recommendations regarding "Guidance for computerized systems used in clinical trials", electronic signature (21 CFR Part 11?) and international standards for health data hosting. In the Ré-Conf-ISS study, access to the database is secured (personal identifier and password) with different levels of security depending on the roles assigned to users. The data are entered on the eCRF (CS Online module Ennov Clinical® software) by data entry operators of the CIC. A data entry guide is made available to operators. A data validation plan, jointly defined between the coordinating investigator and the Methodology and Data Management center, will be

developed and will describe in detail the controls to be executed for each variable. The quality control of data being entered will be exhaustive. Once the entry is made, the consistency of the data will be checked, errors, omissions or inconsistencies will be mentioned (CS Tests module). The data freeze / thaw process will be performed in accordance with the procedure implemented in the Center for Methodology and Data Management.
