Main features

Type of database

Type of database	Study databases
Study databases (details)	Repeated cross-sectional studies (except case control studies)
Database recruitment is made on the basis of:	Another treatment or procedure
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	Promotion of the study via different websites aimed at cannabis users (patient or harm reduction associations, social network).

Database objective

Main objective	Evaluate the impact of the different lockdowns on cannabis use practices among daily users, psychoactive substance use and the onset of related symptoms (withdrawal, pain, sleep disorders, anxiety, depression).
Inclusion criteria	Daily cannabis users or individuals having taken part in the previous CANNAVID series for questionnaires completed from the second lockdown; Aged over 18 years; Able to understand French; Residing in France; Agreeing to take part in the study and having expressed their non-objection.

Population type

Age	Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years) Elderly (65 to 79 years) Great age (80 years and more)
-----	---

Population covered	General population
--------------------	--------------------

Pathology

Gender	Male Woman Other
--------	------------------------

Geography area	National
----------------	----------

Detail of the geography area	France
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	2020
Date of last collection (YYYY or MM/YYYY)	2020
Size of the database	
Size of the database (number of individuals)	[1000-10 000[individuals
Details of the number of individuals	First lockdown: 4,019 participants
Data	
Database activity	Current data collection
Type of data collected	Declarative data
Declarative data (detail)	Internet self-questionnaire
Details of collected declarative data	Sociodemographic characteristics (age, gender, level of education, accommodation, parenthood), before and during the lockdown (accommodation, professional activity, recourse to a food bank); psychoactive substance use (use, supply, storage, quantities used, adverse reactions, withdrawal symptoms, substance analyses, penalties due to cannabis use) before and during the lockdown, changes in use between lockdowns; health status and practices (chronic disorders, treatments, symptoms of Covid-19, overdoses, medical appointments, Hospital Anxiety and Depression scale before and during the lockdown.
Presence of a biobank	No
Health parameters studied	Health event/morbidity Quality of life/health perception
Quality of life/perceived health (detail)	state of health before and during the lockdown
Procedures	

Data collection method	Data collection via the internet
Classifications used	Hospital Anxiety and Depression scale, withdrawal symptoms (American Psychiatric Association 2013), ICD-10
Quality procedure(s) used	methodology centre specialised in epidemiological studies
Participant monitoring	Yes
Details on monitoring of participants	please state whether the participant took part in the first questionnaire series
Followed pathology	F10-F19 - Mental and behavioural disorders due to psychoactive substance use
Links to administrative sources	No

Promotion and access

Promotion
