

- Forgoing care during the lockdown period due to the COVID-19 epidemic

Head :Douillet Delphine, MITOVASC

Last update : 05/05/2021 | Version : 1 | ID : 73989

General

Identification

Detailed name Forgoing care during the lockdown period due to the COVID-19 epidemic

CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency) authorisation CPP SUD EST VI - ID-RCB 2020-A01960-39

General Aspects

Medical area Emergency medicine

Study in connection with Covid-19 Yes

Pathology (details) Forgoing care

Health determinants Healthcare system and access to health care services

Scientific investigator(s) (Contact)

Name of the director Douillet

Surname Delphine

Address 4 rue Larrey

Unit MITOVASC

Organization Angers University Hospital

Collaborations

Participation in projects, networks and consortia No

Funding

Funding status	Public
Details	No funding for this study.
Governance of the database	
Sponsor(s) or organisation(s) responsible	Angers University Hospital
Organisation status	Public
Presence of scientific or steering committees	No
Additional contact	
Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Not-repeated cross-sectional studies (except case control studies)
Database recruitment is carried out by an intermediary	A selection of health institutions and services
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	Descriptive, observational, prospective, two-centre study. Each patient attending an emergency department will be interviewed directly. Those agreeing to complete the questionnaire will attend an individual interview. An information letter on the study will be given to the patient before collecting their answers. The patient may, at any time, express their objection to this study, and their personal data will then be erased.
Database objective	
Main objective	Compare the rate of patients forgoing care during the lockdown period in France, in emergency facilities at Angers and Le Mans hospitals, with that observed during a previous study in 2017.
Inclusion criteria	All adult patients having attended the A&E department at Angers University Hospital and Le Mans Hospital, able and agreeing to complete the

questionnaires directly or with the assistance of a translator.

Population type

Age
Adulthood (19 to 24 years)
Adulthood (25 to 44 years)
Adulthood (45 to 64 years)
Elderly (65 to 79 years)
Great age (80 years and more)

Population covered General population

Pathology

Gender
Male
Woman
Other

Geography area National

Detail of the geography area Angers and Le Mans

Data collection

Dates

Date of first collection (YYYY or MM/YYYY) 2020

Date of last collection (YYYY or MM/YYYY) 2020

Size of the database

Size of the database (number of individuals) [1000-10 000[individuals

Details of the number of individuals 1800

Data

Database activity Data collection completed

Type of data collected
Clinical data
Declarative data
Administrative data

Clinical data (detail) Direct physical measures

Details of collected clinical data forgoing care, impact of Covid on appointments

Declarative data (detail)	Paper self-questionnaire Face to face interview
Details of collected declarative data	Waiver of care, covid impact on consultation
Administrative data (detail)	lifestyle, professional activity
Presence of a biobank	No
Health parameters studied	Health care consumption and services
Care consumption (detail)	Medical/paramedical consultation
Procedures	
Data collection method	self-administered questionnaire or questionnaire administered by another person
Classifications used	not documented
Quality procedure(s) used	not documented
Participant monitoring	No
Followed pathology	
Links to administrative sources	No
