Funding status Public

Details	DREES (Ministère en charge de la santé) : 65000
Governance of the database	
Sponsor(s) or organisation(s) responsible	Direction de la recherche, des études, de l'évaluation et des statistiques (DREES)
Organisation status	Public
Additional contact	
Main features	
Type of database	
Type of database	Health relevant administrative databases
Database recruitment is carried out by an intermediary	A selection of health institutions and services
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	For each department, collect aims the completeness of the health certificates. Failing that, it concerns a randomly selected sample by the PMI services (Mother and Child Health), based on a minimum survey rate of 10%, the size of the sample cannot be inferior to 1000 units for each of the three types of health certificates.
Database objective	
Main objective	Provide individual follow-up: identification by a medical team of families eligibles for a personalized help on medico-social criteria. Produce epidemiological data and indicators (prematurity, growth retardation, transfer, vaccination coverage, number of consultations during pregnancy, fertilization age, caesarean section rate...)
Inclusion criteria	All children born in 2006 and thereafter for the cs8 All children born in 2005 and thereafter for th All children born in 2004 and thereafter for the cs24
Population type	
Age	Newborns (birth to 28 days) Infant (28 days to 2 years)
Population covered	General population

Gender	Male Woman
Geography area	Departmental
Detail of the geography area	France
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	2006
Date of last collection (YYYY or MM/YYYY)	2011
Size of the database	
Size of the database (number of individuals)	Greater than 20 000 individuals
Details of the number of individuals	800 000 birth a year.
Data	
Database activity	Current data collection
Type of data collected	Clinical data
Clinical data (detail)	Direct physical measures
Presence of a biobank	No
Health parameters studied	Health event/morbidity Health care consumption and services Others
Care consumption (detail)	Hospitalization Medical/paramedical consultation
Other (detail)	Prevention
Procedures	
Data collection method	The medical record is filled by health professionals at the maternity (for the CS8). Cs9 and cs24 data comes from doctors offices or pmi centers. Departmental data is then merged, balanced and corrected, to be representative of the structure by the sex of the children, the age of the mother and

the distribution by department.

Participant monitoring Yes
