Organisation status Public

Sponsor(s) or organisation(s) responsible INSERM - Institut National de la Santé et de la Recherche Médicale

Organisation status Public

## Additional contact

## Main features

### Type of database

Type of database Study databases

Study databases (details) Repeated cross-sectional studies (except case control studies)

Database recruitment is carried out by an intermediary A selection of health institutions and services

Database recruitment is carried out as part of an interventional study No

Additional information regarding sample selection. Exhaustive sample of all births over the equivalent of a week in a given month

## Database objective

Main objective This survey's objectives are to:

- find out the main health condition indicators, medical practices during pregnancy and delivery and perinatal risk factors; it will thus be possible to monitor their trends from previous national surveys (1995, 1998 and 2003);
- provide a national sample with which it is possible to compare département or regional data from other sources;
- provide information for guiding public health

decisions and evaluate health actions in the perinatal field.

#### Inclusion criteria

All children born alive, still born and therapeutic abortions, if the birth or pregnancy termination takes place at 22 weeks of amenorrhea at least or if the child weighs at least 500 grams at birth. The collection comprises births in all maternity departments (public and private) over the equivalent of a week. Since the event observed is childbirth, a questionnaire is completed for each child in the case of twins, triplets or more.

### Population type

#### Age

Newborns (birth to 28 days)

#### Population covered

General population

#### Gender

Male  
Woman

#### Geography area

National

#### Detail of the geography area

Metropolitan France and overseas department

### Data collection

#### Dates

#### Date of first collection (YYYY or MM/YYYY)

1995

#### Date of last collection (YYYY or MM/YYYY)

2010

### Size of the database

#### Size of the database (number of individuals)

[10 000-20 000[ individuals

#### Details of the number of individuals

15 000 (2010)

### Data

#### Database activity

Current data collection

#### Type of data collected

Clinical data  
Declarative data

#### Clinical data (detail)

Direct physical measures

Declarative data (detail)	Face to face interview
Presence of a biobank	No
Health parameters studied	Health event/morbidity Health care consumption and services
Care consumption (detail)	Hospitalization Medical/paramedical consultation
<b>Procedures</b>	
Data collection method	Systematic collection Three data sources: interviews in person with women just after childbirth, data from the maternity medical record and data describing maternity departments
Participant monitoring	No
Links to administrative sources	No
<b>Promotion and access</b>	
<b>Promotion</b>
