

# HASI-PRO - Cohort on Acute Liver Failure without Identified Cause

Head :Duclos-Vallée Jean-Charles, Centre Hépato-Biliaire  
Coilly Audrey, Centre Hépato-Biliaire

Last update : 08/21/2014 | Version : 1 | ID : 8360

General	
Identification	
Detailed name	Cohort on Acute Liver Failure without Identified Cause
Sign or acronym	HASI-PRO
CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency) authorisation	CNIL
General Aspects	
Medical area	Anatomy - Cytology Biology
Health determinants	Nutrition
Others (details)	Acute Liver Failure
Keywords	Rare disease, liver function, indeterminate acute liver failure, liver transplantation, criteria for transplantation, antibodies, toxicology, survival., cause, etiology, genetics
Scientific investigator(s) (Contact)	
Name of the director	Duclos-Vallée
Surname	Jean-Charles
Address	Hôpital Paul Brousse - 12-14 avenue Paul Vaillant Couturier - 94800 Villejuif - France
Phone	+33 (0)1 45 59 33 36
Email	jean-charles.duclos-vallee@pbr.aphp.fr
Unit	Centre Hépato-Biliaire

Organization	Hôpital Paul
Name of the director	Coilly
Surname	Audrey
Address	Hôpital Paul Brousse - 12-14 avenue Paul Vaillant Couturier - 94800 Villejuif - France
Phone	+33 (0)1 45 59 33 36
Email	audrey.coilly@pbr.aphp.fr
Unit	Centre Hépatobiliaire
Organization	Hôpital Paul
Collaborations	
Funding	
Funding status	Public
Details	APHP
Governance of the database	
Sponsor(s) or organisation(s) responsible	Centre hépatobiliaire Paul Brousse
Organisation status	Public
Additional contact	
Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Cohort study
Database recruitment is carried out by an intermediary	A selection of health institutions and services
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	Comprehensive (all patients presenting in the Centre hépatobiliaire Paul Brousse and matching the inclusion criteria).

## Database objective

### Main objective

Acute liver failure predictive factors known and validated and the default for patients admitted in a context of acute liver failure without identified cause and includes liver transplantation. The identification of new prognostic criteria which is essential for better care and improved survival of patients admitted for acute liver failure. Principal objective: - To determine early prognostic factors of mortality in patients admitted for acute liver failure without identified cause. Secondary objectives: - Describe the evolution of acute liver failure without identified cause in 3 months. - Search posterior rare acute liver failure causes: genetic study (polymorphism of the genes encoding cytokeratins 8 and 18), detection of novel antibodies by serum proteome analysis, toxicological study by mass spectrometry.

### Inclusion criteria

- Over the age of 18 - cytolysis and/or cholestasis WITH prothrombin time less than 50% or greater than 1.5 INR - signed informed consent by the patient or trusted person - without chronic underlying liver disease - cause of acute liver failure not identified at admission - non-participation in a therapeutic study may alter the patient's prognosis

## Population type

### Age

Adulthood (19 to 24 years)  
Adulthood (25 to 44 years)  
Adulthood (45 to 64 years)  
Elderly (65 to 79 years)  
Great age (80 years and more)

### Population covered

Sick population

### Gender

Male  
Woman

### Geography area

Local

### French regions covered by the database

Île-de-France

### Detail of the geography area

Centre Hépatobiliaire Paul Brousse, Villejuif, France.

## Data collection

### Dates

### Date of first collection (YYYY or

2013

MM/YYYY)	
Date of last collection (YYYY or MM/YYYY)	2016
Size of the database	
Size of the database (number of individuals)	< 500 individuals
Details of the number of individuals	100
Data	
Database activity	Current data collection
Type of data collected	Clinical data Biological data
Clinical data (detail)	Direct physical measures
Biological data (detail)	DNA collection, urine and serum for future research into genetic and toxic factors.
Presence of a biobank	Yes
Contents of biobank	Serum Fluids (saliva, urine, amniotic fluid, ?) DNA
Details of biobank content	DNA, urine, serum
Health parameters studied	Health event/morbidity Health event/mortality Health care consumption and services
Care consumption (detail)	Hospitalization
Procedures	
Data collection method	Systematic collection of clinical and biological data J0, J1, J2, J3, J5, J7, M1, M3 and during HT (data already collected as part of the treatment). Etiological research depth to M1. Blood and urine J0 for the formation of biological collections. Freezing of tissue for liver biopsy sample or a native liver sample in the case of HT.
Participant monitoring	Yes
Details on monitoring of	J0, J1, J2, J3, J5, J7, M1, M3 and during liver

participants	transplantation.
