Main features

Type of database

Type of database Study databases

Study databases (details) Cohort study

Database recruitment is carried out by an intermediary A selection of health care professionals
A selection of health institutions and services

Database recruitment is carried out as part of an interventional study No

Additional information regarding sample selection. all subjects meeting criteria and agreeing to participate are included, no randomization

Database objective

Main objective Studying cholesterol rate as a predictor of the occurrence of suicidal behaviour at 18 months in the context of a depressive episode

Inclusion criteria Adults, meet DSM-IV criteria for a major depressive episode

Population type	
Age	Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years)
Population covered	General population
Gender	Male Woman
Geography area	Departmental
French regions covered by the database	Languedoc-Roussillon Midi-Pyrénées
Detail of the geography area	Hérault
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	06/2012
Size of the database	
Size of the database (number of individuals)	[500-1000[individuals
Details of the number of individuals	95 individus fin 2012 - Prévision: 555 patients 95 individuals end 2012 - Prediction: 555 patients
Data	
Database activity	Data collection completed
Type of data collected	Clinical data Declarative data Biological data
Clinical data (detail)	Direct physical measures Medical registration
Declarative data (detail)	Paper self-questionnaire Face to face interview
Biological data (detail)	complete blood count, coagulation, ionogram, renal and liver function, thyroid function, fasting blood glucose, lipid profile, BHCG Women
Presence of a biobank	Yes

Contents of biobank	Serum DNA
Details of biobank content	Serum and DNA. The samples will be stored for 30 years
Health parameters studied	Health event/morbidity Health event/mortality Health care consumption and services
Care consumption (detail)	Hospitalization Medical/paramedical consultation Medicines consumption

Procedures

Data collection method	Clinical data are collected during consultations at 1, 3, 6, 12 and 18 months and biological data at 6, 12 and 18 months
Participant monitoring	Yes
Details on monitoring of participants	5 visits over a period of 18 months (repeated clinical and biological evaluations)
Links to administrative sources	No

Promotion and access

Promotion

Access

Terms of data access (charter for data provision, format of data, availability delay)	Data may be available to other researchers in the context of ancillary work (after agreement of Prof. Courtet)
Access to aggregated data	Access on specific project only
Access to individual data	Access on specific project only
