Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Not-repeated cross-sectional studies (except case control studies)
Database recruitment is carried out by an intermediary	A selection of health care professionals
Database recruitment is carried out as part of an interventional study	No
Database objective	
Main objective	Describe the various arrangements for caring for patients with type-2 diabetes treated by associating oral diabetes medication and insulin as well as their repercussion on HbA1c
Inclusion criteria	man or woman, over the age of 18 years, having type-2 diabetes treated by the association of oral diabetes medication and insulin for at least 6 months, accepting to participate in the study
Population type	
Age	Adulthood (45 to 64 years) Elderly (65 to 79 years)
Population covered	Sick population
Gender	Male Woman
Geography area	National
Detail of the geography area	France

Data collection

Dates

Date of first collection (YYYY or MM/YYYY) 2007

Date of last collection (YYYY or MM/YYYY) 2008

Size of the database

Size of the database (number of individuals) [1000-10 000] individuals

Details of the number of individuals 2330

Data

Database activity Data collection completed

Type of data collected Clinical data
Biological data

Clinical data (detail) Direct physical measures

Biological data (detail) HbA1, GAJ,

Presence of a biobank No

Health parameters studied Health event/morbidity

Procedures

Data collection method type-2 diabetes, adaptation, treatments, association, oral diabetes medication, insulin

Participant monitoring No

Links to administrative sources No
