- hospitalised and presenting with acute mania pertaining to primary bipolar disorder

Population type	
Age	Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years)
Population covered	Sick population
Gender	Male Woman
Geography area	National
Detail of the geography area	Metropolitan France
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	12/2000
Date of last collection (YYYY or MM/YYYY)	04/2002
Size of the database	
Size of the database (number of individuals)	[1000-10 000[individuals
Details of the number of individuals	1,090
Data	
Database activity	Data collection completed
Type of data collected	Declarative data
Declarative data (detail)	Face to face interview
Details of collected declarative data	Manic state rating scale (MRS and Beigel-Murphy), associated depression (list of depressive symptoms, MADRS) and psychotic elements (SAPS).
Presence of a biobank	No
Health parameters studied	Health event/morbidity

	Health event/mortality
Procedures	
Participant monitoring	Yes
Links to administrative sources	No
Promotion and access	
Promotion
