Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Case control study
Database recruitment is carried out by an intermediary	A selection of health institutions and services
Database recruitment is carried out as part of an interventional study	No
Database objective	
Main objective	The main objective is to confirm that schizophrenic patients are apathetic compared to health volunteers. Secondary objectives: - to investigate if apathy is related to a particular aspect of the disease (i.e., negative or positive symptomatology); - to investigate if apathy correlates with executive dysfunction; - to investigate if apathy is associated with a specific mechanism using an experimental task specially designed to characterise different mechanisms (i.e., "a-motivation", "cognitive inertia", and "uncoupling"); - to investigate if there is a volumetric abnormality affecting the executive system in apathetic schizophrenic patients; - to link these possible volumetric abnormalities to the prefrontal cortex-basal ganglia circuits according to a specific apathy subtype within the apathetic schizophrenic group.

apathetic schizophrenic group.

Inclusion criteria

Date of first collection (YYYY or

Healthy volunteers:

-Male or female;

-Aged 20 to 55;

-With health insurance.

Exclusion criteria:

-History of neurological disorder;

-Previous head injury;

-Alcohol or substance abuse;

-On psychotropic medication;

-Contraindication to MRI.

Schizophrenia patients:

-Male or female;

-Aged 20 to 55;

-With health insurance;

-Daignosed as schizophrenic according to DSM-IV R criteria:

-Illness with a duration of over 5 years;

-Clinical stability during the past 2 months (defined as no treatment modification or hospitalisation 2 months prior to evaluation).

Exclusion criteria:

-Schizo-affective disorder;

-History of neurological disorders (past or present);

-Previous head injury;

-Alcohol or substance abuse;

-Contraindication to MRI.

Population type	
Age	Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years)
Population covered	Sick population
Gender	Male Woman
Geography area	Local
French regions covered by the database	Île-de-France
Detail of the geography area	Psychiatric department in Corentin Celton Hospital
Data collection	
Dates	

2012

Size of the database	
Size of the database (number of individuals)	< 500 individuals
Details of the number of individuals	12 schizophrenic patients; 15 healthy volunteers.
Data	
Database activity	Current data collection
Type of data collected	Clinical data Paraclinical data
Clinical data (detail)	Medical registration
Details of collected clinical data	Apathy (measured by Starkstein's Apathy Evaluation Scale), neuropsychological performance: global mental efficience (Mill Hill B, PM 38), frontal assessments (BREF, MCST, TMT A and B, Stroop, verbal fluences), social cognition (SEA); memory (Grober and Buschke, direct-indirect digit span), instrumental functions: Rey figure), positive and negative symptomatology: PANSS, SANS/SAPS, Calgary Scale, SDS.
Paraclinical data (detail)	Volumetric brain abnormalities.
Presence of a biobank	No
Health parameters studied	Health event/morbidity
Procedures	
Participant monitoring	No
Links to administrative sources	No
Promotion and access
