

MANIF-2000 FOLLOWED BY MANIF-2 - Cohort of HIV-Seropositive Individuals Infected by Use of Intravenous drugs: Prospective Study in Marseille, Avignon, Nice and Ile-de-France

Head :Carrieri Maria-Patrizia, ORS PACA - INSERM U912
Obadia Yolande, ORS PACA

Last update : 09/05/2017 | Version : 3 | ID : 60063

General

Identification

Detailed name Cohort of HIV-Seropositive Individuals Infected by Use of Intravenous drugs: Prospective Study in Marseille, Avignon, Nice and Ile-de-France

Sign or acronym MANIF-2000 FOLLOWED BY MANIF-2

CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency) authorisation

Accord CNIL

General Aspects

Medical area Infectious diseases

Health determinants Addictions

Keywords related diseases, hepatic, psychiatric, genital and gynaecological, secondary side-effects from treatment, Health episodes, cardiovascular, neurological, infectious, prevention

Database objective

Main objective

General objective: MANIF 2000 is a cohort of HIV-1 seropositive patients that have been infected through intravenous drug use. Patients should have an initial CD4 count of $> 300/\text{mm}^3$. The initial aim of this study was to compare HIV progression according to whether patients were still active addicts, substituting or sober. This goal was revised in light of the changes in HIV history with the release of highly active combination therapy and the treatment of addicts with buprenorphine substitution. MANIF 2000 has become an observational cohort study focused on risk-related sexual behaviours associated with drug addiction, as well as adherence to therapy and interaction between substitution and treatment. Secondary objectives: - To determine the impact of depression and HIV treatment adherence on clinical progression; - to determine the impact of retention in substitution treatment on virological success.

Inclusion criteria

HIV-1 or HIV-2 seropositive patients that have been infected through intravenous drug use with an initial CD4 count greater than $300/\text{mm}^3$ and at clinical stage A or B.

Population type

Age

Adulthood (19 to 24 years)
Adulthood (25 to 44 years)
Adulthood (45 to 64 years)

Population covered

Sick population

Gender

Male
Woman

Geography area

Local

Detail of the geography area

Multicentric cohort throughout France (10 centres):
Marseille, Avignon, Nice, Ile de France

Data collection

Dates

Date of first collection (YYYY or MM/YYYY)

07/1995

Date of last collection (YYYY or MM/YYYY)

06/2006

Size of the database

Size of the database (number of individuals) < 500 individuals

Details of the number of individuals 467

Data

Database activity Data collection completed

Type of data collected
Clinical data
Declarative data
Paraclinical data
Biological data

Clinical data (detail)
Direct physical measures
Medical registration

Declarative data (detail)
Paper self-questionnaire

Paraclinical data (detail)
Puncture, biopsy

Biological data (detail)
Type of samples taken: Haematology, chemistry, immunology, HIV serology, viral load, other serological tests such as Hepatitis B and C and freezing.

Presence of a biobank Yes

Contents of biobank
Serum
Plasma

Details of biobank content
Serum bank, plasma bank

Health parameters studied
Health event/morbidity
Health event/mortality
Health care consumption and services

Care consumption (detail)
Hospitalization
Medical/paramedical consultation
Medicines consumption

Procedures

Data collection method
Self-administered questionnaire: entry from a paper questionnaire
Interviews: entry from a paper questionnaire
Clinical examinations: handwritten.

Participant monitoring Yes

Details on monitoring of participants	Follow-up duration: 11 years
