

SPRIK - General practitioner/paediatrician-based surveillance to estimate the disease burden of rotavirus gastroenteritis in children <5 years of age in France

Head :Leclerc-Zwirn Christel, Laboratoire GSK

Last update : 01/01/2018 | Version : 1 | ID : 161

General

Identification

Detailed name General practitioner/paediatrician-based surveillance to estimate the disease burden of rotavirus gastroenteritis in children <5 years of age in France

Sign or acronym SPRIK

CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency) authorisation CNIL 770334

General Aspects

Medical area Infectious diseases

Keywords general practice, rotavirus

Scientific investigator(s) (Contact)

Name of the director Leclerc-Zwirn

Surname Christel

Phone +33 (0)1 39 17 86 96

Funding status Private

Details GSK laboratory

Governance of the database

Sponsor(s) or organisation(s) responsible	Laboratoire GSK
Organisation status	Private
Additional contact	
Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Not-repeated cross-sectional studies (except case control studies)
Database recruitment is carried out by an intermediary	A selection of health institutions and services
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	Any child under the age of 5 years from the monitored population who spontaneously consulted an investigating center for a acute gastroenteritis (defined as the appearance of diarrhea in the 14 previous days) was included in a registry and the study was proposed to the parents of the child or to the child's legal tutors
Database objective	
Main objective	Estimate the incidence of RVGE leading to a consultation of a general practitioner or pediatrician in a monitored population of children under the age of 5 years.
Inclusion criteria	? Any child under the age of 5 years from the monitored population who spontaneously consults an investigating center for a acute gastroenteritis
Population type	
Age	Infant (28 days to 2 years) Early childhood (2 to 5 years)
Population covered	Sick population
Gender	Male

Woman

Geography area International

Detail of the geography area European

Data collection

Dates

Date of first collection (YYYY or MM/YYYY) 2005

Date of last collection (YYYY or MM/YYYY) 2008

Size of the database

Size of the database (number of individuals) [1000-10 000[individuals

Details of the number of individuals 1463

Data

Database activity Data collection completed

Type of data collected
Clinical data
Declarative data
Biological data

Clinical data (detail)
Direct physical measures
Medical registration

Declarative data (detail)
Paper self-questionnaire
Phone interview

Biological data (detail)
Stool sample. Analysis of the presence of rotavirus

Presence of a biobank No

Health parameters studied
Health event/morbidity
Health care consumption and services

Care consumption (detail)
Hospitalization
Medicines consumption

Procedures

Data collection method
Eligibility questionnaire: verification of the eligibility criterion, characteristics of the episode

of gastroenteritis on the day of consultation
 Inclusion questionnaire: results of the samples with the RotaStrip® test, characteristic of the patients included, diagnosis and care during the consultation, information on the children living in the same household, antecedents and history of the children included, economic questionnaire and characteristics of the episode of gastroenteritis before the consultation
 Telephone questionnaire: medical evaluation of the patients over the 14 days following the consultation at the doctor's, information on the other children in the household suffering from gastroenteritis, economic questionnaire
 Laboratory results: confirmation of the presence of rotavirus, genotyping of the samples

Participant monitoring Yes

Details on monitoring of participants 14 days after release from the hospital
