Main features

Type of database

Type of database Study databases

Study databases (details) Repeated cross-sectional studies (except case control studies)

Database recruitment is carried out by an intermediary A selection of health institutions and services

Database recruitment is carried out as part of an interventional study No

Additional information regarding sample selection. Sampling: two levels national sample in metropolitan France: hospitals following at least 150 HIV-infected patients , then patients (102 services in 2003, about 80 in 2010), 3000 patients. Every hospital in Antilles and French Guiana: 15% of the active list (500 patients).

Database objective

Main objective

The main objective is to describe in a detailed way the life of HIV positive people in metropolitan France, Antilles and French Guiana since the introduction of effective methods of treatment. This survey completes the epidemiological surveillance plan to different groups composing French population, the cohorts allowing to better understand the factors determining the HIV virus evolution, the clinical trials for the development of new treatments and strategies. It's important to understand the personal and social situation of people living with HIV/aids, and to identify its individual, social and medical determinants, and to update the different dimensions of everyday life: treatment, work, resources, social life, sexuality, familiar life. This to identify what could be improved in caring or social plans to better meet specific needs of men and women, young and adults, homo or eterosexuals, French or migrants, or long-standing patients or newly detected infections.

Inclusion criteria

18 years old or more, living with HIV since at least 6 months, French or foreigners residing in France since at least 6 months, and followed in outside consultations into public or private hospitals.

Population type

Age

Adulthood (19 to 24 years)
Adulthood (25 to 44 years)
Adulthood (45 to 64 years)

Population covered

Sick population

Pathology

I - Certain infectious and parasitic diseases

Gender

Male
Woman

Geography area

National

Detail of the geography area

Metropolitan France and French African departments (Antilles and French Guiana)

Data collection

Dates

Date of first collection (YYYY or MM/YYYY)

2003

Date of last collection (YYYY or MM/YYYY)

2011

Size of the database

Size of the database (number of individuals) [1000-10 000] individuals

Details of the number of individuals 3000 patients in metropolitan France and 500 from French African departments

Data

Database activity Current data collection

Type of data collected
Clinical data
Declarative data
Administrative data

Clinical data (detail) Direct physical measures

Declarative data (detail) Paper self-questionnaire
Face to face interview

Administrative data (detail) Age, sex, etc.

Presence of a biobank No

Health parameters studied
Health event/morbidity
Health care consumption and services
Quality of life/health perception
Others

Care consumption (detail)
Hospitalization
Medical/paramedical consultation
Medicines consumption

Other (detail) prevention (behaviors, screening), social inequalities in health
