Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Cohort study
Database recruitment is carried out by an intermediary	A selection of health institutions and services
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	Prospective Inclusion cut-off date not determined
Database objective	
Main objective	General objective: To identify new biomarkers along with environmental and genetic risk factors for chronic kidney disease progression and related complications Secondary objectives: - To describe the natural history of chronic kidney disease in terms of optimised treatment according to

	international recommendations - To evaluate the realisation and relevance of the recommended objectives (K/DOQI, KDIGO, HAS)
Inclusion criteria	Patients over 18 years of age with chronic kidney disease confirmed by the presence of kidney damage markers: biological, morphological or histological abnormalities and glomerular filtration rate measurement by reference method (renal clearance of 51CR-EDTA), stages 1-5 of the 2005 KDIGO classification, not on dialysis and not grafted.
Population type	
Age	Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years) Elderly (65 to 79 years)
Population covered	Sick population
Gender	Male Woman
Geography area	Local
