### Governance of the database

Sponsor(s) or organisation(s) responsible	Laboratoire GSK
Organisation status	Private
<b>Additional contact</b>	
<b>Main features</b>	
<b>Type of database</b>	
Type of database	Study databases
Study databases (details)	Longitudinal study (except cohorts)
Database recruitment is carried out by an intermediary	A selection of health care professionals A selection of health institutions and services
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	<p>Sending of an email presenting the study to all GPs and pediatricians in the Thalès network offering them to participate in the study. The Thalès network to date has 1,200 general practitioners and 100 pediatricians.</p> <p>? Doctors interested in the study can identify themselves on the Internet website and confirm their participation agreement.</p> <p>A random drawing will then be done to recruit the necessary number of participating doctors.</p> <p>? 1st phase: For a period of 15 days, the first children (3 on the average) consulting for an episode of AOM will be included in the study and will be followed.</p>
<b>Database objective</b>	
Main objective	Describe in general practice the care for AOM in children aged 0 to 6 years in France.
Inclusion criteria	<p>? Child aged 0 to 6 years</p> <p>? Child with an episode of AOM diagnosed by a doctor</p> <p>? Parent(s)/tutor(s) who accept the inclusion of the child in the study</p>
<b>Population type</b>	
Age	Newborns (birth to 28 days) Infant (28 days to 2 years)

Early childhood (2 to 5 years)  
Childhood (6 to 13 years)

Population covered Sick population

Gender Male  
Woman

Geography area National

Detail of the geography area France

## Data collection

### Dates

Date of first collection (YYYY or MM/YYYY) 2008

Date of last collection (YYYY or MM/YYYY) 2009

### Size of the database

Size of the database (number of individuals) < 500 individuals

Details of the number of individuals 439

### Data

Database activity Data collection completed

Type of data collected Clinical data  
Declarative data

Clinical data (detail) Direct physical measures  
Medical registration

Declarative data (detail) Paper self-questionnaire

Presence of a biobank No

Health parameters studied Health care consumption and services  
Quality of life/health perception

Care consumption (detail) Hospitalization  
Medical/paramedical consultation  
Medicines consumption

### Procedures

Data collection method	Medical questionnaire, parent questionnaire, follow-up questionnaire
Participant monitoring	Yes
Details on monitoring of participants	Each child will be followed for 2 weeks (medical follow-up questionnaire and parent questionnaire). In the case of a relapse appearing in the week following the AOM episode, a follow-up questionnaire will be completed.
Links to administrative sources	No
<b>Promotion and access</b>	
<b>Promotion</b>	
<b>Access</b>	
Terms of data access (charter for data provision, format of data, availability delay)	Publications in progress
Access to aggregated data	Access on specific project only
Access to individual data	Access on specific project only
