Last update : 06/01/2020 Version : 2 ID : 60123		
General		
Identification		
Detailed name	Epidemiological Study on Post-Surgical Neuropathic Pain	
Sign or acronym	EDONIS	
CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency) authorisation	CNIL: 16/03/2007	
General Aspects		
Medical area	Neurology	
Health determinants	Genetic Iatrogenic	
Keywords	chronic pain, type of surgery, neuropathic characteristics, specific tools, Health episodes, consultations, assessment, pain, prevalence	
Scientific investigator(s) (Contact)		
Name of the director	Duale	
Surname	Christian	
Address	63003 CLERMONT FERRAND CEDEX 01	
Phone	+ 33 (0)4 73 17 84 18	
Email	cduale@chu-clermontferrand.fr	
Unit	CPC-CIC	
Organization	INSERM CIC	

Funding	
Funding status	Mixed
Details	24 % PHRC NATIONAL - INSERM - CHU DE CLERMONT-FERRAND PFIZER
Governance of the database	
Sponsor(s) or organisation(s) responsible	CHU de Clermont-Ferrand
Organisation status	Public
Additional contact	
Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Cohort study
Database recruitment is carried out by an intermediary	A selection of health institutions and services
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	Inclusion method: prospective Other bodies active in creating this cohort: CHU, CHG, CLCC, CLINICS
Database objective	
Main objective	General objective: The EDONIS projects (PHRC national 2005) piloted by the Clermont-Ferrand Clinical Investigation Centre is a national multicentric epidemiological study whose primary objective is to know the prevalence of persistent pain at 3 and 6 months after surgery. This is the first prospective study of this size on chronic post-surgical pain which is a public health problem accounting for almost 15% of new consultations in specialist pain management institutions. Secondary objective: EDONIS also aims to identify pre-and peri-operative pain risk factors and to characterise its mechanisms with a focus on neuropathic factors. Eight types of conventional surgery were selected because (a) they are already known to induce persistent pain (thoracotomy, mastectomy, inguinal hernia repair), (b) they are frequently practised in

caesarean section, cholecystectomy, saphenectomy) or (c) surgery has a suspected risk		
Population type Age Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years)		saphenectomy) or (c) surgery has a suspected risk of nerve injury (knee arthroscopy). There is also an
