# ESCAPE - Estimated cost of the lower limb osteoarthrosis (knee arthrosis and coxarthrosis) in the general population and in those treated by spa therapy

Head :Moore Nicholas, Service de Pharmacologie, CIC-P 0005-INSERM U657- Université Bordeaux Segalen

Last update : 10/27/2017 | Version : 1 | ID : 2853

Last update : 10/27/2017   Version : 1   ID : 2853		
General		
Identification		
Detailed name	Estimated cost of the lower limb osteoarthrosis (knee arthrosis and coxarthrosis) in the general population and in those treated by spa therapy	
Sign or acronym	ESCAPE	
CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency) authorisation	CCTI-RS 07.102, CNIL 907058	
General Aspects		
Medical area	Rheumatology	
Study in connection with Covid- 19	No	
Health determinants	Lifestyle and behavior Medicine	
Keywords	non-spa treatment, spa treatment, spa ?cure?, patients, pharmacoepidemiology, cohort, Department of Pharmacology, Bordeaux	
Scientific investigator(s) (Contact)		
Name of the director	Moore	

Name of the director	Moore
Surname	Nicholas
Address	Bât du Tondu - Case 41 - 146, Rue Léo Saignat - 33076 BORDEAUX Cedex
Phone	+ 33 (0)5 57 57 46 75
Email	nicholas.moore@pharmaco.u-bordeaux2.fr

# Type of database

Type of database Study databases

Study databases (details)

Longitudinal study (except cohorts)

Database recruitment is carried

out by an intermediary

A selection of health care professionals

A selection of health institutions and services

Database recruitment is carried out as part of an interventional

study

No

Additional information regarding

sample selection.

ESCAPEg cohort consisted of patients recruited from a random sample of general practitioners in the Aquitaine region. ESCAPEc cohort consisted of patients recruited from a sample of physicians practicing in three participating hydrotherapy spas (Dax, Saint-Paul-lès-Dax, Eugenie-les-Bains).

## Database objective

Main objective	The main objective of this study was to develop a reference statistical model predictive of the average cost per patient of the lower limb osteoarthrosis in the general population (ESCAPEg) and in those treated by spa therapy (ESCAPEc), and to identify the main determinants.
Inclusion criteria	Patient with tibiofemoral osteoarthrosis and / or patellofemoral uni and / or bilateral, and / or hip osteoarthrosis and uni / or bilateral; aged more than 20 years; Patient affiliated personally to the Caisse Nationale de l'Assurance Maladie des Travailleurs Salariés (CNAM-TS) for at least six months; Patient giving written informed consent for participatation in the study and to extract the patient data from the ERASME database of the CNAM-TS.
Population type	
Age	Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years) Elderly (65 to 79 years) Great age (80 years and more)
Population covered	Sick population
Gender	Male Woman
Geography area	Regional
French regions covered by the database	Aquitaine Limousin Poitou-Charentes
Detail of the geography area	General practitioners of the Aquitaine region (ESCAPEg) and spa centre physicians at Dax, Saint-Paul-lès-Dax, and Eugénie-les-Bains (ESCAPEc)
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	2007
Date of last collection (YYYY or MM/YYYY)	2008
Size of the database	
Size of the database (number of individuals)	[500-1000[ individuals

Details of the number of individuals	566 patients (271 in ESCAPEg, 295 in the ESCAPEc)
Data	
Database activity	Data collection completed
Type of data collected	Clinical data Declarative data Administrative data
Clinical data (detail)	Direct physical measures
Declarative data (detail)	Paper self-questionnaire Phone interview
Administrative data (detail)	Name, residence address, telephone number
Presence of a biobank	No
Health parameters studied	Health event/morbidity Health care consumption and services Quality of life/health perception
Care consumption (detail)	Hospitalization Medical/paramedical consultation Medicines consumption
Procedures	
Data collection method	During inclusion consultation, a medical questionnaire was completed by the physician. Specifically for the ESCAPEc cohort, physicians were helped by a hydrotherapy CRA when filling-out the medical questionnaire. At follow-up, data collection was identical in both cohorts: patients were followed by a CRA for six months (telephone questionnaire at 3 and 6 months), patients also completed two forms collecting healthcare data.
Participant monitoring	Yes
Details on monitoring of participants	Patients were contacted at 3 and 6 months for telephone interview with a CRA. The telephone questionnaire was standardised (quality and living conditions, environment, assessment of pain, work and daily tasks, self determined health status). Their consumption of healthcare, and other health

products, was also collected using two

patients filled-out in real time.

standardised forms (one for the first three months and one for the last three months of follow-up) that

Promotion and access	
Promotion	
Access	
Terms of data access (charter for data provision, format of data, availability delay)	A final study report was submitted to the Institute of hydrotherapy. The final study report and scientific communications (posters, papers,) were validated by the study Scientific Committee. Ownership of study data is the subject of an agreement between the University Bordeaux Segalen and the Institute of hydrotherapy. Terms for third-party access to the database are to be defined.
Access to aggregated data	Access on specific project only
Access to individual data	Access on specific project only
