Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Not-repeated cross-sectional studies (except case control studies)
Database recruitment is carried out by an intermediary	A population file
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	<p>Sampling: The surveying rate of the initial sample formed in 1995 is 1/40, or around 17,830 pupils. The survey scope is the whole of the initial sample, not including deaths and moves abroad. This scope breaks down into two parts:</p> <ul style="list-style-type: none"> - the young people sampled in the panel in 1995 who left the education system in or before 2005. They were surveyed by the National Institute of Statistics and Economic Studies (INSEE). - the young people sampled in the panel in 1995 who were still in the education system in 2007. They were surveyed by the Directorate for Evaluation, Forecasting and Performance (DEPP)
Database objective	
Main objective	The initial objective of the panel is to observe how school pathways turn out for pupils who entered sixth grade in 1995. Upon leaving secondary

school, the annual questioning of the EVA survey and SUP survey keep track of the panel and observe how the young person's personal situation, studies, professional life and living conditions evolve.

The complementary health questionnaire rounded off this panorama on an ad hoc basis in 2007, by providing information about young people's lifestyles, social and sex lives, mental health, at-risk behaviors, use and/or abandonment of health care and major health events they have experienced in the past and as adults.

Inclusion criteria	sample of young people who entered sixth grade in 1995
Population type	
Age	Adulthood (19 to 24 years)
Population covered	General population
Gender	Male Woman
Geography area	National
Detail of the geography area	Metropolitan France
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	05/2007
Size of the database	
Size of the database (number of individuals)	[10 000-20 000[individuals
Details of the number of individuals	Des 17830 jeunes entrés en 6ème en 1995, le panel est constitué en 2007, du fait de l'attrition, d'un peu plus de 11 000 jeunes âgés en moyenne de 23 ans. Of the 17,830 young people who entered sixth grade in 1995 and due to attrition, the panel made up in 2007 comprised a little over 11,000 young people aged 23 on average.
Data	
Database activity	Data collection completed

Type of data collected	Declarative data
Declarative data (detail)	Paper self-questionnaire
Presence of a biobank	No
Health parameters studied	Health event/morbidity Health care consumption and services Quality of life/health perception
Care consumption (detail)	Medical/paramedical consultation
Procedures	
Data collection method	questionnaire-based survey
Participant monitoring	No
Links to administrative sources	No
Promotion and access	
Promotion	
Access	
Terms of data access (charter for data provision, format of data, availability delay)	Data can be accessed via the Quételet research center Publications on the INSEE and DEPP websites.
Access to aggregated data	Free access
Access to individual data	Access on specific project only
