Main features

Type of database

Type of database Study databases

Study databases (details) Not-repeated cross-sectional studies (except case control studies)

Database recruitment is carried out by an intermediary A population file

Database recruitment is carried out as part of an interventional study No

Additional information regarding sample selection. Drawn from lot of 100 schools (60 in Aix-Marseille and 40 in Nice) taking into account the size of the school, whether it is in the public or private sector,

a priority education zone or in a rural or urban area. 5 children are then drawn from each selected school according to primary school education level, from CP (cours préparatoire) to CM2 (cours moyens). Different questionnaires are also given to the teacher and parents of each child selected.

Database objective

Main objective

1) To assess the prevalence of most the common mental health issues (with teachers and children) and physical issues (with parents) for primary school children. 2) to assess the principle social and psychological risk factors for mental health among young people (with parents). 3) To assess the use of health services (with parents).

Inclusion criteria

Children attending private or public primary schools in Aix-Marseille and Nice.

Population type

Age

Childhood (6 to 13 years)

Population covered

General population

Gender

Male
Woman

Geography area

Regional

French regions covered by the database

Provence - Alpes - Côte d'Azur

Detail of the geography area

Provence-Alpes-Côte d'Azur (PACA)

Data collection

Dates

Date of first collection (YYYY or MM/YYYY)

11/2004

Date of last collection (YYYY or MM/YYYY)

01/2005

Size of the database

Size of the database (number of individuals)

[1000-10 000] individuals

Details of the number of individuals

2 341 enfants

Data

Database activity Data collection completed

Type of data collected Declarative data
Paraclinical data
Administrative data

Declarative data (detail) Paper self-questionnaire

Paraclinical data (detail) - Questionnaire for children: Dominic Interactive. -
Questionnaire for parents: Strength and Difficulties
Questionnaire (R. Goodman) Stressful life events for
the child Parent-child relationship (attitudes and
overprotection) Questions on child sociability Day-
to-day accidents List of child's chronic diseases,
height, weight. Parent psychological distress (SF
36), CAGE (problematic alcohol use) Use of health
care system by child; participants, hospitalisation,
medication - Questionnaire for teachers:
oppositional behaviour, hyperactivity and attention
deficit disorder (DSM IV) Estimate of parent mental
health

Administrative data (detail) Questionnaire for children: Gender, age of child,
Questionnaire for parents: child and parent country
of birth, parent socioprofessional category, family
composition, family income level, social welfare,
supplementary health insurance cover.

Presence of a biobank No

Health parameters studied Health event/morbidity
Health care consumption and services
Quality of life/health perception

Care consumption (detail) Hospitalization
Medical/paramedical consultation
Medicines consumption

Procedures

Data collection method Data regarding the child is gathered by an
interactive self-administered questionnaire by
computer; Data regarding the teacher and parents
are gathered by self-administered questionnaire.

Participant monitoring No
