Organisation status	Public
Additional contact	
Main features	
Type of database	
Type of database	Study databases
Study databases (details)	Not-repeated cross-sectional studies (except case control studies)
Database recruitment is carried out by an intermediary	A selection of health care professionals
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	Adult patients recruited with the help of 1,906 general practitioners.
Database objective	
Main objective	To describe the frequency and severity of allergic rhinitis in French asthmatic patients.
Inclusion criteria	<ul style="list-style-type: none"> - male and female - adult - asthmatic
Population type	
Age	<ul style="list-style-type: none"> Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years)

Population covered	Sick population
Gender	Male Woman
Geography area	National
Detail of the geography area	France
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	04/2005
Date of last collection (YYYY or MM/YYYY)	10/2005
Size of the database	
Size of the database (number of individuals)	[10 000-20 000[individuals
Details of the number of individuals	14,703 subjects
Data	
Database activity	Data collection completed
Type of data collected	Clinical data Declarative data
Clinical data (detail)	Direct physical measures
Details of collected clinical data	regular treatment, type of asthma, type of smoker
Declarative data (detail)	Face to face interview
Details of collected declarative data	- Juniper Asthma Control Questionnaire (ACQ) - Juniper Rhinoconjunctivitis Quality of Life Questionnaire
Presence of a biobank	No
Health parameters studied	Health event/morbidity Quality of life/health perception
Procedures	
Data collection method	Questionnaire completed by general practitioner

Participant monitoring	Yes
