Type of database

Study databases

Study databases (details)

Not-repeated cross-sectional studies (except case control studies)

Database recruitment is carried out by an intermediary

A selection of health institutions and services

Database recruitment is carried out as part of an interventional study

No

Additional information regarding

Subjects were selected from centres treating HIV+

sample selection.

patients. Selected centres should have at least 5 reported cases of HIV-infected patients per year between 2000-2004.

Database objective

Main objective To study the prevalence of smoking in HIV-infected patients.

Inclusion criteria

- Male and female;
- Adult;
- Infected with HIV.

Population type

Age

- Adulthood (19 to 24 years)
- Adulthood (25 to 44 years)
- Adulthood (45 to 64 years)

Population covered Sick population

Gender

- Male
- Woman

Geography area National

Detail of the geography area France (82 centres in France treating HIV+ patients).

Data collection

Dates

Date of first collection (YYYY or MM/YYYY) 05/2006

Size of the database

Size of the database (number of individuals) [500-1000[individuals

Details of the number of individuals 593

Data

Database activity Data collection completed

Type of data collected Declarative data

Declarative data (detail) Paper self-questionnaire

Details of collected declarative data	Anonymous questionnaire. Sixty questions on living with the disease, smoking, alcohol consumption and drug use, plans, level of social inclusion and possible degree of depression.
---------------------------------------	---

Presence of a biobank	No
-----------------------	----

Health parameters studied	Health event/morbidity Others
---------------------------	----------------------------------

Other (detail)	Nicotine dependence assesment using the Fagerström Scale.
----------------	---

Procedures

Participant monitoring	No
