Organisation status Public

Presence of scientific or steering committees No

## Additional contact

## Main features

### Type of database

Type of database Study databases

Study databases (details) Not-repeated cross-sectional studies (except case control studies)

Database recruitment is carried out by an intermediary A population file

Database recruitment is carried out as part of an interventional study No

Additional information regarding sample selection. Participants were recruited through two-stage random sampling (clusters followed by households), stratified by socio-economic cluster level based on INSEE clusters. 0-4 year-old children and women of childbearing age were included in all randomly selected households to be over-

represented. However, children aged 5-14 years old and other adults (men aged 15 and older and women aged 50 and older), were included in one in two households.

## Database objective

**Main objective** To describe food consumption, physical activity and nutrition status of the population living in Mayotte, with particular focus on children under 5 years old and women of childbearing age.

**Inclusion criteria** Individuals living in an ordinary household in Mayotte and capable of understanding the aims of the study.

## Population type

**Age** Newborns (birth to 28 days)  
Infant (28 days to 2 years)  
Early childhood (2 to 5 years)  
Childhood (6 to 13 years)  
Adolescence (13 to 18 years)  
Adulthood (19 to 24 years)  
Adulthood (25 to 44 years)  
Adulthood (45 to 64 years)  
Elderly (65 to 79 years)  
Great age (80 years and more)

**Population covered** General population

**Pathology**

**Gender** Male  
Woman

**Geography area** Departmental

**Detail of the geography area** Mayotte

## Data collection

### Dates

**Date of first collection (YYYY or MM/YYYY)** 05/2006

**Date of last collection (YYYY or MM/YYYY)** 10/2006

### Size of the database

**Size of the database (number of** [500-1000] individuals

individuals)

Details of the number of individuals

969 individuals enrolled from 315 randomly selected ordinary households (household participation rate: 95.7%)

## Data

Database activity

Data collection completed

Type of data collected

Declarative data  
Paraclinical data

Declarative data (detail)

Face to face interview

Paraclinical data (detail)

---

Presence of a biobank

No

Health parameters studied

Health event/morbidity  
Others

Other (detail)

Anthropometry, blood pressure.

## Procedures

Data collection method

Data collection was realised at participants' homes in face-to-face interviews conducted by specially trained researchers. A questionnaire on housing characteristics was also completed by the household contact person. Anthropometric measurements and blood pressure were also taken. Individual food consumption data were collected using two 24-hours recalls conducted face-to-face. The first recall on the day of the first visit and the second recall one month later.

Quality procedure(s) used

Internal unit procedures.

Participant monitoring

No

Followed pathology

Links to administrative sources

No

## Promotion and access

### Promotion
