### Identification

Detailed name Epidemiology and treatment patterns in Soft Tissue

Sarcoma (STS): a retrospective analysis on French

expert centers databases

CNIL registration number, number and date of CPP agreement, AFSSAPS (French Health Products Safety Agency)

authorisation

CNIL: 910390

## **General Aspects**

Medical area Cancer research

Pathology (details) Soft Tissue Sarcoma (STS)

Health determinants Healthcare system and access to health care

services

Keywords Soft Tissue Sarcoma (STS)

# Scientific investigator(s)

(Contact)

Name of the director Pr BLAY

Surname Jean-Yves

### Additional contact

Main Continues	
Main features	
Type of database	
Type of database	Study databases
Database recruitment is carried out by an intermediary	A selection of health institutions and services
Database recruitment is is made on the basis of:	Another treatment or procedure
Database recruitment is carried out as part of an interventional study	No
Additional information regarding sample selection.	Retrospective databases analysis (RRePS, NetSarc, and Conticabase) by the French Sarcoma Group (GFS)
Database objective	
Main objective	To describe the treatment patterns of advanced (unresectable locally advanced or metastatic) STS (including viscus sarcoma) patients in France.
	Secondary objectives:  - To describe STS (including viscus sarcoma) patients characteristics (sociodemographic data, type of sarcoma, histological subtype, tumor location, stage of the disease etc).  - To assess the STS (including viscus sarcoma) incidence in France  - To describe STS diagnosis (anatomopathology double review) and treatment history  - To describe the duration of the different treatments of STS disease
Inclusion criteria	Patients with a diagnosis of STS, aged > 18 years- old, registered in the Conticabase/NetSarc/RRePS databases between January, 1st 2012 and December, 31st 2013 by a French expert center participating in the study between January, 1st 2012 and December, 31st 2013.
Population type	
Age	Adulthood (19 to 24 years) Adulthood (25 to 44 years) Adulthood (45 to 64 years) Elderly (65 to 79 years) Great age (80 years and more)

Population covered       Sick population         Gender       Male Woman         Geography area       National         Detail of the geography area       France         Data collection         Dates         Date of first collection (YYYY or MIN/YYYY)         Date of last collection (YYYY or MIN/YYYY)       31/12/2013         Size of the database         Size of the database (number of individuals)       [1000-10 000[ individuals]         Details of the number of individuals       Conticabase: N = 1099 / NetSarc: N = 4551 / inRePs: N = 6812         Data         Data collection completed         Type of data collected       Clinical data         Clinical data (detail)       Medical registration         Details of collected clinical data       Sociodemographic characteristics of patients; Sarcoma epidemiology (type of sarcoma); STS epidemiology (histological subtype, tumor location, tumor depth, grade, stage at diagnosis, stage); Diagnosis (anatomopathology double review by an expert center, initial diagnosis, confirmatory diagnosis; Unrescable locally advanced or metastatic STS (1st line systemic treatment, 1st line CT, date of progression after 1st line treatment, 2nd, 3rd and 4th line CT and drug type, intial diagnosis after of progression after 1st line treatment, 2nd, 3rd and 4th line CT and drug type)          Procedures       Procedures
