Main features

Type of database	
Type of database	Study databases
Study databases (details)	Cohort study
Database recruitment is carried out by an intermediary	A selection of health institutions and services
Database recruitment is made on the basis of:	Another treatment or procedure
Database recruitment is carried out as part of an interventional study	No
Database objective	
Main objective	The aim of this study, carried out on a cohort of 77 children born between 1985 and 1986 in Roubaix and monitored until the age of 25, is to study the global consequences, at adulthood, of intrauterine exposure to more than 21 glasses of alcohol per week.
Inclusion criteria	Children born between 1985 and 1986 at Roubaix.
Population type	
Age	Adulthood (19 to 24 years)
Population covered	General population
Gender	Male Woman
Geography area	Local
French regions covered by the database	Nord - Pas-de-Calais Picardie
Detail of the geography area	Roubaix and surrounding area
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	2011
Date of last collection (YYYY or MM/YYYY)	2012

Size of the database

Size of the database (number of individuals) < 500 individuals

Details of the number of individuals 77

Data

Database activity Data collection completed

Type of data collected Declarative data

Declarative data (detail) Face to face interview
Phone interview

Details of collected declarative data Length of education; qualifications obtained; academic path; childhood; family life; alcohol? tobacco? drug use

Presence of a biobank No

Health parameters studied Health event/morbidity
Health care consumption and services

Care consumption (detail) Hospitalization
Medical/paramedical consultation
Medicines consumption

Procedures

Data collection method Heteroquestionnaire

Participant monitoring Yes

Details on monitoring of participants Previously followed-up at birth and at 4 years old.

Links to administrative sources Yes

Linked administrative sources (detail) CPAM to find those lost to follow-up.
