Main features

Type of database

Type of database Study databases

Study databases (details) Not-repeated cross-sectional studies (except case control studies)

Database objective

Main objective The objectives are:
- to establish a collection of reproducible information in a school environment from representative samples of the enrolled population that will be able to provide better knowledge of the health condition of students, to identify risky behaviours of adolescents
- to optimise the practice of health care professionals of the national education system and to promote the homogenisation of practices.

Inclusion criteria Students in one of the high schools of the Montpellier school district.

Population type

Age Childhood (6 to 13 years)
Adolescence (13 to 18 years)

Population covered General population

Pathology

Gender	Male Woman
Geography area	Regional
French regions covered by the database	Languedoc-Roussillon Midi-Pyrénées
Detail of the geography area	Languedoc-Roussillon
Data collection	
Dates	
Date of first collection (YYYY or MM/YYYY)	2008
Date of last collection (YYYY or MM/YYYY)	2009
Size of the database	
Size of the database (number of individuals)	[1000-10 000[individuals
Details of the number of individuals	1520
Data	
Database activity	Data collection completed
Type of data collected	Clinical data Declarative data
Clinical data (detail)	Medical registration
Details of collected clinical data	Biometrics, physical activity and sedentary activity, Dentition, Vision, Language, Hearing, Respiratory health, Vaccinations, Handicaps and chronic diseases
