Organisme Scientific interest group on infants, early childhood in context (BECO) - Toulouse Midi-Pyrénées Federal University

Caractéristiques

Type de base de données

Type de base de données Study databases

Objectif de la base de données

Objectif principal Describe the experience of mothers, fathers and their young children before the end of the first lockdown, what they perceived as the best and worst moments during the health crisis, and shed light on the most widely used activities, possibly gender- and socially-based, and which emerge from household chores (home-schooling, care, upkeep) together with the associated emotions for each parent. The analyses are compared based on demographic and socioeconomic variables (gender, age, level of education, accommodation, employment, etc.).

Critères d'inclusion

- Adult (age? 18 years)
- With at least one child under 6 years of age
- Residing in France
- Having spent the whole lockdown (17 March to 11 May 2020) in France

Type de population

Age Adulthood (19 to 24 years)

Adulthood (25 to 44 years)
Adulthood (45 to 64 years)

Population concernée General population

Pathologie

Sexe Male
Woman
